

I support the comments filed by The American Radio Relay League concerning Docket ET 03-104. The proponents of Broadband over Power Line (BPL) do not have enough scientific data in support of BPL. There needs to be more research and improvements in technology to guarantee that there will be no interference to services in the 2 MHz - 80 MHz frequency range. The approval of ET 03-104 would violate the FCC rules on non-interference. Amateur radio is a vital part of homeland security. We are always there, always ready, always willing to assist the public in emergencies. Do not permit this interference to occur. Remember, the amateur radio service has always been able to get through when all other communications have failed or are overloaded.

Thank You,
David A. Hatfield
