

I support fully the well founded Comment submitted by The American Radio Relay League concerning Docket ET 03-104. I conclude the comments made by proponents of Broadband over Power Line (BPL) have little if any credible scientific data to support approval of this docket at this time. Further research and innovations in BPL will be needed to avoid the great risk this innovative technology will cause irreparable interference to services licensed to operate in the 2 MHz - 80 MHz frequency range. This particular area of spectrum has international potential for interference due to the propagation potential of even small amounts of RF. Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public.

Thank you
