

Dear Sir/Madam,

This note is in support of our local volunteer Firefighters and Emergency personnel, who risk their lives to save one soul, or a nearby home, even our National Forests, or rescue those distressed on the side of a road.

This note is in support of the served agencies that spend their lives dedicated to helping those in need of such services when disaster strikes.

This note is in support of the volunteer Ham operators who use their equipment in the time of emergencies, to those same ham operators who donate their time, energy and personal funds, to make sure they, and their equipment, are always prepared.

This note is to support all of those who have made comments about this docket, to keep the above service communications alive, and functioning, thru our precious airwaves.

I have seen first hand how those airwaves, and Ham communications, have worked effectively over the years, when nothing else could, what can BPL say? Not much so far, except that it could cripple what has worked.

In support of those who made comments, I also, do Not support the BPL technology, and urge you to reconsider your position.
