

I am writing in regards to the BPL proposals you are currently considering. I would like to voice to you my concern that this medium and the detrimental effects it will have to all other users of the hf bands including amatuer radio. I sincerely hope before granting approval for this proposal all concerns of interference are considered and it does not just become an issue of money. Part 15 rules should not be changed to allow more interference so as to make BPL a reality. Also if BPL is such a sucess why is Japan and Germany taking it out of service. I respectfully request you do not change part 15 rules to allow BPL as it is not a proven medium with respect to not causing interference to other users in the hf spectrum.

Thank You for taking the time to review my concerns.
