

The BPL will interfere with High Freq. radio. High Freq. radio is used by a number of organizations, one being the Federal government and many others. Foreign terrorist and criminals use it underground to communicate long distance, our government needs to monitor this activity for the purpose of Homeland Security! It will also affect 600,000 amateur/ham operators who provide emergency communications here in the U.S. during disasters and such. Ships also use High Freq. radio to communicate back to land. If an alternative has to be created it will be very costly.

Thank you,
Alfred J. Richter
