

We are not doing enough to protect our wildlife and we will pay dearly for this in the end.

I ask the following:

Protect migratory birds. Many are dying as a result of colliding with more than 138,000 radio and TV towers. These towers are having deleterious affects on our birds in a number of ways. Conduct research and find ways in which to protect our birds. Implement the solutions found. Review how towers impact the environment and then require that the negative impact be eliminated promptly. Require that all towers adhere to regorous environmental standards.

Thank you for your time and cooperation.
