Gentlemen:

I would like to comment on RM10811 concerning the elimination of CW code requirement for amateur radio license.

I wish to protest this for amateur radio. First it is and has been a requirement in the past and still should be now.

There are times, due to atmospheric conditions when voice and other methods will not work and CW code will.

Communication, especially in times of emergency is very important and amateur radio operators have been available many times in those situations. We need to keep the CW code requirement to have operators in times of emergency and also other situations trained for this.

The International Morse Code also makes possible to communicate with other foreign stations who speak a language other than English.

I have worked in the telecommunications business for AT&T, have a General Radio Telephone license and Amateur Radio license.
