

The Honorable Marlene H. Dortch
Federal Communications Commission
445 12th Street S.W.
Washington, DC 20054

Dear Ms. Dortch

Attention Commissioners:

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205 I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 millions each year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarmingly, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers. If you've ever walked around an antenna tower during spring or fall migration, you would know how serious this problem is.

Thank you for accepting my comment.

Sincerely,

Frank & Helen Myers
4946 Lake Mendota Drive
Madison, WI 53705-1376

Dear Ms. Dortch.

Attention Commissioners

Re The Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205

I urge you, as strongly as I know how, act immediately to implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds. Specifically, I urge you to adhere to the U.S. Fish and Wildlife Service (FWS) September 22 Guidelines for siting and construction of communication towers by the FCC to reduce bird deaths: co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse.

As I am sure you know, bird deaths from collisions with communications towers are estimated between 5 million and 40 million each year. The FCC studies indicate that over 90% of the birds killed are neotropical migratory birds, most of which migrate--and are killed--at night. Those killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002). These latter are species in need of special attention to ensure proper management, for example the Cerulean for which a listing petition has been filed under the Endangered Species Act.

I urge you to be vigilant in ensuring that FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and that it acts immediately to prevent further bird carnage at communication towers.

Thank you for this opportunity to comment.

Sincerely,

Jane-Kenn Moffat

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 millions each year

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarmingly, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

Thank you for accepting my comment.

Sincerely,

Joseph Anthony
