

The Honorable Marlene H. Dortch
Federal Communications Commission
445 12th Street S.W.
Washington, DC 20054

Dear Ms. Dortch,

Attention Commissioners,

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 million each year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarming, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

Thank you for accepting my comment. I hope you act so that both wildlife and economic interests can co-exist.

Sincerely,

Jan Garton
219 Westwood Road
Manhattan, KS 66502-3850

The Honorable Marlene H. Dortch

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths - which as you must know are estimated between 5 million and 40 millions each year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarming, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

Thank you for accepting my comment.

Sincerely,

John Jennings

Dear Ms. Dortch:

Attention Commissioners:

Our two sons are men now. Trevor the older son works at the small town hardware store in our town where he spends much of his time installing large appliances. In his spare time he uses his considerable mechanical skills to keep his 4-wheel drive truck and ATV working. Justin is going to college in a small but prestigious school near New York City. We could never afford to send him there, but he was given a great financial package at the school. He seems to be enjoying college life in a very positive way. Lacrosse, fencing, theater and studying keep him busy and socially involved with his fellow students. They are both over 6 ft 4 inches tall, athletic, and good-looking too. People say they get their looks and brains from their mother, and their off the wall sense of humor from me. Their peers respect them for their self-confidence and independent nature. They are sons to make any parents proud. Our sons are the most important and joyful part of my life. Although both my wife and I have spent the greater part of our adult lives interacting with young people as teachers, nothing comes close to the emotional intensity of raising your own children. They are mostly grown and independent of us now, but our commitment to them continues. Today the growth of the human population and the selfish consumerism that is spreading over the Earth is endangering the future of all humans. Will we be able to both save ourselves from self-destruction and maintain our freedom and individuality? I have been teaching students the value of developing a sustainable culture and personal life style for 25 years as a Biology and Environmental Earth Science teacher. I hope that the knowledge I have gained from my masters degree in Biology as well as my extensive reading have been delivered with the passion that I feel for the welfare of our planet. Teaching is a powerful way to have a positive influence on the future, but many issues are too important and too immediate to wait for the future. I am writing today about one of these issues.

This my response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures would greatly reduce bird deaths – which are estimated between 5 million and 40 millions each year.

Thank you.
