

The Honorable Marlene H. Dortch
Federal Communications Commission
445 12th Street S W
Washington, DC 20054

Dear Ms. Dortch.

Attention Commissioners

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 millions each year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarmingly, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

Thank you for accepting my comment.

Sincerely,

Anthony Brusate
524 Rosemont Garden
Lexington, KY 40503-1742

Dear Ms. Dortch:

Attention Commissioners

Ms. Dortch,

As an educator and community leader in various not for profits, I would like to comment on the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO 03-187, FCC 03-205 I am writing to urge the FCC to act now and implement preventative measures on new and existing communications towers to prevent the unnecessary deaths of millions of birds.

This is an unforeseen negative consequence that we users of technology must take some responsibility.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths - which as you must know are estimated between 5 million and 40 millions each year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarmingly, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

I appreciate your accepting my comment.

Sincerely,

Jeanette Auerbach

Dear Ms. Dortch:

Attention Commissioners

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205 I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 millions each year.

The FCC has become an agency that acts as protector for those whom it purports to regulate and has lost a great deal of credibility regarding environmental issues vs the desires of the cell phone business. I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarmingly, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers

Thank you for accepting my comment.

Sincerely,

Jonathan Coker

Washington, DC 20054

Dear Ms. Dortch:

Attention Commissioners:

I would like to comment on the Effects of Communications Towers on Migratory Birds, Notice of Inquiry, FCC 03-205.

I urge the Federal Communications Commission (FCC) to immediately implement measures on all existing and new communications towers to prevent the unnecessary deaths of millions of birds. I urge the FCC to adopt the U.S. Fish and Wildlife Service guidelines for siting and construction of communication towers, including co-location, towers less than 200 feet, eliminating guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates.

The FCC's own studies indicate that over 90% of the birds killed are neotropical migratory birds, which migrate and are killed mostly at night. The birds killed include several endangered species and over 50 species on the U.S. Fish and Wildlife Service's Birds of Conservation Concern List (2002). Particular attention must be paid to the management of these species.

I urge the FCC to comply fully with the Migratory Bird Treaty Act, the National Environmental Policy Act, and the Endangered Species Act and to adopt measures immediately to prevent more bird deaths at communication towers.

Thank you.

Sincerely,

Alexandra Lamb
