

The Honorable Marlene H. Dortch
Federal Communications Commission
445 12th Street S W.
Washington, DC 20054

Dear Ms Dortch:

Attention Commissioners.

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths - which as you must know are estimated between 5 million and 40 millions each year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarmingly, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

Thank you for accepting my comment.

Sincerely,

Linda Stokely
3057 Trotters Field Drive Southwest
Marietta, GA 30064-4455

Dear Ms Dortch:

Attention Commissioners.

To knowingly cause the deaths of millions of birds because of the towers is an affront against all of creation. To allow this to continue will be nothing more than a lack of moral and ethical courage. We want to support you in any way possible to stop the slaughter.

We urge you to consider our comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205 We are writing to ask the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

We urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 millions each year

Washington, DC 20054

Dear Ms. Dortch:

Attention Commissioners.

The Golden Gate Audubonn Society, California's largest Audubon Chapter located in in part in San Francisco, Oakland, Berkeley and Richmond, California, is pleased to comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Mirgratory Birds, WT DKT.NO. 03-187, FCC 03-205 We urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

The Golden Gate Audubon Society urges the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 millions each year.

We have become very aware of the impact towers can have on our passerine species because of our interest in wind power tower impacts. While these impacts may be exacerbated by rotating vanes, the fact remians that there is extensive evidence that radio towers kill millions of birds every year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night Alarmingly, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

The US F&WS Guidelines are reasonable and scientifically defensible. Implementing the Gjdelineswill undoubteidly result ina significant reduction in radio tower caused mortality to passerine birds. Please incorproate these Guidelines into your tower siting process.

Thank you for accepting our comments

The Honorable Marlene H Dortch
Federal Communications Commission
445 12th Street S.W
Washington, DC 20054

Dear Ms. Dortch:

Attention Commissioners:

Please consider this my comment in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT NO. 03-187, FCC 03-205. I am writing to urge the FCC to act now and implement preventative measures on all existing and new communications towers to prevent the unnecessary deaths of millions upon millions of birds.

I urge the FCC to adopt the September 2000 U.S. Fish and Wildlife Service (FWS) Guidelines for siting and construction of communication towers by the FCC. These measures, supported by the best available data, indicate that co-location, keeping towers under 200', avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates would greatly reduce bird deaths – which as you must know are estimated between 5 million and 40 millions each year.

I am aware that the FCC already has studies that indicate over 90% of the birds killed are neotropical migratory birds, and most migrate and are killed at night. Alarming, the birds killed include several endangered species and over 50 species on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to properly manage these species. For example, the Cerulean Warbler is on the 2002 list and a listing petition has been filed under the Endangered Species Act for this bird.

Please see that the FCC complies fully with the Migratory Bird Treaty Act, NEPA, and the ESA, and adopts measures now prevent further bird deaths at communication towers.

Thank you for accepting my comment.

Sincerely,

L Johnson
15737 Tuba St
North Hills, CA 91343-1527

Washington, DC 20054

Dear Ms. Dortch.

Attention Commissioners

I am writing to you in response to the Federal Communications Commission's Notice of Inquiry on the Effects of Communications Towers on Migratory Birds, WT DKT.NO. 03-187, FCC 03-205. I urge the FCC to act now to take preventive measures with all communications towers to prevent the unnecessary death of millions of migratory birds.

I strongly urge the FCC to adopt the U.S. Fish and Wildlife Service Guidelines for siting and construction of communication towers by the FCC, published in September 2000. The best data indicate that collocation, keeping every tower under 200 feet in height, avoiding guy wires, minimizing lighting, and using only white strobes at minimum required pulse rates will greatly reduce the birds' deaths, which are estimated to number between 5,000,000 and 40,000,000 each year.

The FCC already possesses studies that indicate that more than 90% of the birds killed are neotropical migratory birds, and most of them migrate and are killed at night. The birds being killed include several endangered species and more than 50 species that are on the FWS Birds of Conservation Concern List (2002), meaning special attention is needed to manage those species. The Cerulean Warbler is on the list, for example, and a petition to list that bird under the Endangered Species Act is on file.

Please do your utmost to ensure that the FCC will comply fully with the Migratory Bird Treaty Act, NEPA, and the ESA and that it will adopt measures to prevent the death of birds.

Sincerely,

John Burnett
