

Aside from probably interference to radio services, I am equally concerned about interference to BPL from radio, specifically Amateur Radio. In the past, I have had problems with neighbors who have experienced interference to non-Radio Frequency devices including a Sewing Machine. It makes NO difference to the people involved if the FCC says the device must accept interference. Angry neighbors can make your life miserable. I fear this will return us to an era similar to when TVs had a 21Mhz Intermediate Frequency (IF).
