

I have been an XM subscriber since it was first offered in August 2001. I enjoy ALL that XM offers and pay for two subscriptions, including the premium service. I support satellite radio 100%!!! Please allow XM to continue to provide instant traffic and weather. This service is very valuable to me, because I commute 75 miles to work (one way), and can best plan my route to save time, fuel, and avoid unnecessary stress. I commute from Lancaster to Los Angeles via highway 14 in California. Since this highway goes from the city to the desert through many mountain ranges, regular radio reception is extremely poor! I find the information provided on the instant traffic and weather very accurate, conveniently updated, and EXTREMELY PROFESSIONAL, unlike some local radio stations! Because this service is offered via satellite, and earth station repeaters (terrestrial), the signal is clear, and with little to no loss of signal (reception). It would be a dis-service to the public to discontinue, limit, or change the existing service. PLEASE ALLOW XM SATELLITE TO CONTINUE AS IS! Thank you for your consideration.
