

I support xm radio, and appose hr4026. xm radio is the " new" and is the " best". It offers us a different way to enjoy information, music, comedy, news, weather and sports. This is all accomplished by subscriptions that allow us commercial free listening. Commercials are loud, and annoying, and mostly unwanted. Just as the postal service is having to deal with the internet and email rather than hand written stamped letters, the NAB is going to have to learn that there is another way for use to get information and entertainmmnt without having to listen to crap that companies impose on use. We now have a choice. How many times have we said to ourselves, man i wish there wasnt any commercials, and more music. Well its here!!! You know everybody recognizes a good thing, when someone else sees it first. This was a revolutionary idea, and i dont beleive you can hold an idea this great back. The NAB can loby all they want, but we have a collective voice that will support this new way to listen to radio. THE GENIE IS OUT OF THE BOX! For the most part radio is dying, and it is because peope want a change. Its time for change. I believe this is the next step in radio programming. Plus, the crap that is forced on us daily by standard broadcasting is not what we want. xm radio, allows me to pick and chose any type of music, or talk radio, news from almost any large city in america. What a breath of fresh air! All commercial free. No station anywhere can compete with that. And that whats the big flap is all about. NAB grow up! Things change and the big interest broadcasting, and their special interest needs to see that they will have to adjust and change just like the rest of us. NAB, there is a new kid on the block, and that kid is xm radio, with millions of new excited and happy customers." Your customers" ! GET A CLUE HERE, AND AND GET LOST!
