

I support XM Satellite Radio and encourage the FCC to reject NAB's 04-160 petition. I have been a subscriber of XM radio since near the beginning of it's service offering. I live in a rural area of Pennsylvania where our broadcast radio reception is ,in my opinion, quite poor. XM has given me crystal clear reception of such a variety of radio content that I cannot even begin to imagine receiving from broadcast radio. I believe that any interference with satellite radio's freedom of speech would be unconstitutional and a real disservice to consumers like me who depend on XM's clear reception for vital information and entertainment.sincerely,  
Mark J. Reefer
