

I am a subscriber of XM radio, and find its traffic and weather information very useful. The only reason that I can understand for the opposition to satellite radio, including XM, by the National Association of Broadcasters to offering weather and traffic is to stifle legitimate competition. As I pay for the XM radio service, I should not be limited by the broadcast industry's fear of competition. I urge you to reject the NAB's petition 04-160. I object to the NAB's attempt to limit free speech.
