

XM-Radio is cool, fun, and excellent informational radio. The listener has a wide range to pick from like the 40's 50's all the way to city travel weather. You even can hear the nascar races on there. So why are you all trying to take it off the air for. Seems like everytime somebody starts doing good in a program, etc, somebody tries to interfere and tries to make a big thing about. Just like the record company's tried to put a stop to the public from burning music of the computers. That put you back to act of freedom of speech. Cause they will do one way or the other. Just like Satillite TV the very first it came out everyone just about it had one. Then they started charging for programs to keep you from watching them and that didn't help just made it more exciting to watch all kinds of movies all the way to all kinds of music. That's right I said all kinds of music. So let leave XM-Radio right where it is at. It's a great radio to have to listen too and etc.
