Re: Notice of Oral Ex Parte Presentation
in WT Dockets No. 02-381, 03-264

Dear Ms. Dortch:

This is to report that I had a phone conversation today with Roger Noel of the Wireless Telecommunications Bureau relating to the above-referenced proceeding. During the course of the conversation, I discussed QUALCOMM's concern that any increase to PCS base station power limits be technology-neutral and not have an adverse impact on CDMA and WCDMA networks which use wider channels, and thus fewer carriers per MHz, than GSM and TDMA networks. I summarized QUALCOMM's proposal in the Biennial Review harmonization proceeding that the Commission establish a limit of 5040 Watts EIRP/MHz, measured in 1 MHz, for PCS base station power. I explained that such an EIRP/MHz limit would address the Commission's concern, the prevention of harmful interference, by regulating the total power radiated from a base station without favoring or disfavoring any air interface.

Finally, I shared QUALCOMM's view that low noise amplifier technology has improved the noise figure of receivers, but to enjoy the benefits of this technology, it is necessary to increase the PCS base station power limits, in a technology-neutral manner.

I am filing this letter electronically via the Commission's ECFS system.

Sincerely yours,

/s/ Dean R. Brenner
