

04-151

I am in favor of opening up the 3650 to 3700 mhz spectrum to unlicensed wireless services.

Wisps need another option for bandwidth in most areas. For instance in my area every unlicensed band is in use/overuse. Keeping in mind this is a town of Populations 13,000. making it difficult to offer reliable service without extra cost and more spectrum pollution. this spectrum would be ideally situated between the 2.4 and 5.3/5.8 bands.  
thank you for your consideration.
