

Please take these comments into consideration of allowing the 3.6ghz frequency into the unlicensed spectrum for wireless internet service providers. This movement will allow the spectrum to be used more efficiently and cost effectively for both urban and rural deployment. Many WISPs' are pioneers in bringing affordable broadband capability as well as service to many citizens, and this will only help to further technology, bring economic growth and much better service to a majority of the public. Thank you for your much needed consideration as well as your time.
