

BellSouth Analysis of CARE Codes as Proposed by the Joint Petitioners

TCSIs	Definition	BellSouth Scenario	Minimum	Comments
0101	Subscription Order - All Terminals if any with submitted WTN	If an IXC is contacted by a customer to establish service, the contacted IXC must notify the LEC providing local service to the customer that the IXC has been chosen as the customer's PIC.	Yes	
0104	Subscription Order - All WTNs and terminals if any with submitted BTN	If an IXC is contacted by a customer to establish service, the contacted IXC must notify the LEC providing local service to the customer that the IXC has been chosen as the customer's PIC.	Yes	
0105	Subscription Order - WTN only	If an IXC is contacted by a customer to establish service, the contacted IXC must notify the LEC providing local service to the customer that the IXC has been chosen as the customer's PIC.	Yes	
0501	Request for information for submitted ANI	A local service provider must supply the BN, BA upon request of an IXC.	Yes	
2003	Subscription Order Install - End User selected AC through Provider	A local service provider must notify the IXC selected as the presubscribed carrier when a customer establishes new local service or changes the PIC.	Yes	
2004	Subscription Order Install - Confirmation of AC initiated order	This is a confirmation response to the 0101/0104/0105 and should be sent in response to scenario 5.	Yes	
2005	Subscription Order Install - End User selected AC through Provider - Moving		No	Some CLECs may not be able to identify a move. Some moves may be done with N/D orders which would generate generic 2003 and 2203. TCSI 2003 would provide the Carrier with the same basic information in the detail record as TCSI 2005.
2007	Subscription Order Install - New responsible party - Outstanding charges not assumed		No	This TCSI is not supported by BellSouth due to BellSouth Service Order Process. When there is a change in the responsible party and N/D order are done. The old responsible parties service is disconnect and reestablished with the new responsible party. This generate a more generic disconnect and connect such as 2203/2003. TCSI 2003 would provide the Carrier with the same/if not more information in the detail record as 2007.
2008	Subscription Order Install - End User selected AC through Provider - New Service		No	TCSI 2003 would provide the Carrier with the same basic information in the detail record as TCSI 2008.
2009	Subscription Order Install - End User Selected AC through Provider - Change of PIC		No	TCSI 2003 would provide the Carrier with the same basic information in the detail record as TCSI 2009.
2010	Subscription Order Install - End User selected AC through Provider - Additional line		No	TCSI 2003 would provide the Carrier with the same basic information in the detail record as TCSI 2010.
2011	Subscription Order Install - End user selected AC through Provider due to dispute over PIC selection		No	The new carrier doesn't need to know there was a dispute.
2020	Subscription Order Install - Confirmation of AC initiated order with Reseller Indicator Only.		No	This code is currently not supported by BellSouth. Toll Reseller information is not stored in BellSouth database since Toll Resellers have a reselling relationship with the IXCs.
2201	Subscription Service Disconnect - Service disconnect - Unspecified reason		No	There should be no reason why an LSP disconnects the end users PIC for an "Unspecified Reason." Either the end user contacted the LSP or the IXC to request a PIC change.
2202	Subscription Service Disconnect - Service Disconnected Moving		No	Some CLECs may not be able to identify a move. Some moves may be done with N/D orders which would generate generic 2003 and 2203. TCSI 2203 would provide the same basic information in the detail record layouts.
2203	Subscription Service Disconnect - End User canceled AC service through Provider	A local service provider must notify the presubscribed IXC when a customer removes that IXC as the presubscribed Carrier.	Yes	
2206	Subscription Service Disconnect - End User canceled AC service through another AC order	This is the disconnect sent to the previous Carrier as a result of an 0101/0104/0105 being sent to the local service provider. It also falls under scenario 3.	Yes	
2212	Subscription Service Disconnect - Previous Responsible party - Final bill rendered		No	This TCSI is not supported by BellSouth due to BellSouth Service Order Process. When there is a change in the responsible party and N/D order are done. The old responsible parties service is disconnect and reestablished with the new responsible party. This generate a more generic disconnect and connect such as 2203/2003. TCSI 2203 would provide the Carrier with the same/if not more information in the detail record as 2212.

BellSouth Analysis of CARE Codes as Proposed by the Joint Petitioners

TCSIs	Definition	BellSouth Scenario	Minimum	Comments
2215	Subscription Service Disconnect - Service disconnect - Partial		No	TCSI 2203 would provide the Carriers with the same basic information in the detail record as TCSI 2215.
2216	Subscription Service Disconnect - Service disconnect - Final		No	TCSI 2203 would provide the Carriers with the same information in the detail record as TCSI 2216.
2217	Subscription Service Disconnect - End user canceled AC service - Disputed PIC Selection - 1 PIC change charge		No	This is an alternative to 2219 - which would be beneficial for Carriers to receive since the end user has disconnected them over a PIC dispute.
2218	Subscription Service Disconnect - End user canceled AC service - Disputed PIC Selection - 2 PIC change charges		No	This is an alternative to 2219 - which would be beneficial for Carriers to receive since the end user has disconnected them over a PIC dispute.
2219	Subscription Service Disconnect - End user canceled AC service - Disputed PIC	This is necessary due to slamming rules. The Carrier that the end user has disputed needs to be notified.	Yes	The Carrier needs to know that an end user has disconnected them as the Carrier of Choice as a result of a PIC dispute.
2231	Subscription Service Disconnect - Service disconnected - Number Portability	A local service provider must notify an IXC when a customer is porting a TN to a new provider.	Yes	The NPI field in the data matrix (position 790) being populated with "W" would indicate to the Carrier that the number ported from Wireline to Wireless.
2233	Subscription Service Disconnect - End User transferred to new LSP In a Local Resale Environment.		No	A CLEC may not know if an end user transferred to a LEC and is not longer in a resold environment or if the end user transferred to another CLEC and remains in a resold environment. LECs are aware of who the end user is transferring to, therefore it is easier for this code to be implemented/supported.
2234	Subscription Service Disconnect - Local Reseller notification of termination of local resale arrangement		No	This is an alternative to TCSI 2233, which BellSouth does support. TCSI 2203 would provide the Carrier with the same basic information in the detail record.
2317	End User Information Change - One or more end user information changes	This is necessary due to end user account information changing.	Yes	
2368	End User Information Change - BTN/Account Level information change		No	This code was designed for the EC-PIC gateway which is no longer in use. The 2368/2369 were also designed to be used in lieu all other 23XX codes
2369	End User Information Change - WTN/Line Level Information Change		No	This code was designed for the EC-PIC gateway which is no longer in use. The 2368/2369 were also designed to be used in lieu all other 23XX codes
2501	Response to AC Request for Information (05XX) - BNA Provided	A local service provider must supply the BN, BA upon request of an IXC.	Yes	This TCSI was not included in the original petition, but should be used in a "minimum" scenario instead of 2503/2504.
2503	Response to AC Request for Information (05XX) - BNA for ANI is assigned to requesting AC		No	TCSI 2501 would provide the BNA as requested by the Carriers. TCSI 2503 indicates to the Carrier that the end user is PIC'd to them, which is above and beyond the BNA information.
2504	Response to AC Request for Information (05XX) - BNA for ANI is not assigned to requesting AC		No	TCSI 2501 would provide the BNA as requested by the Carriers. TCSI 2503 indicates to the Carrier that the end user is PIC'd to them, which is above and beyond the BNA information.
2710	Advisory Information - Temporary Suspension of Service - Non Payment		No	Since Service has been suspended for non-payment there would be no billable usage on the line.
2711	Advisory Information - Service restored from temporary suspension - Non payment		No	Since Service has been suspended for non-payment there would be no billable usage on the line.
2716	Advisory Information - Access to AC's network blocked - Non payment		No	Since Access to the AC's network is blocked there would be no billable usage on the line.
2717	Advisory Information - Access to AC's network restored		No	Since Access to the AC's network is blocked there would be no billable usage on the line.
2720	Advisory Information - End user service blocked - reasons other than non payment		No	Alternative to 2716
2721	Advisory Information - End user service blocked - reason not specified		No	Alternative to 2716
21XX/31XX/41XX	Rejects	If a PIC order is rejected by a local service provider, the local service provider must notify the IXC and provide a reason for the rejection.	Yes	If a local service provider receives a PIC change request from a Carrier that is flawed in some way it is their responsibility to notify the Carrier of the problems with the order so that a corrected order can be submitted.

Column Explanation

Column A	TCSIs - Transaction Code Status Indicator	This is the CARE Code associated with each definition
Column B	Definition	The definition of the CARE Code as defined by the OBF
Column C	BellSouth Scenario	The proposed BellSouth scenarios that should trigger the exchange of information (BellSouth Comments, Dkt 02-386, June 3, 2004)
Column D	Minimum	This column indicates whether BellSouth analysis determined if the code should be a part of "Minimum CARE"
Column E	Comments	This column provides comments as to the reasons why the code should or should not be a part of "Minimum CARE"
