Bulk Migration Scheduling Tool: Advantages

- **Decreases interval before first available due date**
- **CLEC selects due dates based on Network availability**
- **Web based, access via PMAP**

>> Bulk Migration Scheduling Tool: Description

The Bulk Migration Scheduling Tool, when used with the Bulk Migration process, as defined within the CLEC Information Package for UNE-P to UNE-Loop Bulk Migration, will allow CLECs to schedule migrations on future due dates before submitting the Bulk LSR. Also available via the Scheduling Tool is the capability to request the "Special Handling" option which will allow the CLEC to request, on the selected due date, migration of specific accounts within the Extended Basic Hours of Operation or, for coordinated conversions, within a 8 AM – 12 Noon or 1 PM - 5 PM time window.

>> Bulk Migration Scheduling Tool: Process

To schedule a due date, the CLEC will access the Scheduling Tool; select an individual Central Office, then view the daily Bulk Migration cut capacity available for any due date within the next 120 calendar days. A single CLEC may reserve up to 125 of the 200 lines to be cut per day, per Central Office, when ordered using the Bulk Migration process. After inputting all of the required fields, a Bulk Order Package Identifier (BOPI) will be returned to the CLEC for input on the Bulk Migration LSR as the Project Identifier.

Bulk Migration Scheduling Tool: Input View - State & ACTL

0.1.1 State

The state field identifies state reservation location. The following rules apply:

	Field Name	Source	Error	Rule Text
1	State	WHMMYY $.state_lkp		The field functions as a drop down box. The program uses the ST_DESC field in the box. EXCLUSION: where ST_CD = 'ZZ'
2	This field is a required input.			

0.1.2 Wire Center

The wire center field identifies wire center clli code reservation location. The following rules apply:

	Field Name	Source	Error	Rule Text
1	ACTL	WHMMYY $.wire_center_lkp		The field functions as a drop down box based upon the state selected. Example: If Alabama is selected, the ACTLs appear in the drop down box. The program uses first 8 characters of the WIRE_CTR_CLLI_CD field in the box. EXCLUSION: where CURR_IND = 'N'
2	This field is a required input.

Bulk Migration Scheduling Tool: Input View - Calendar

0.1.1 Reservation Calendar

The reservation calendar identifies the bulk migration availability for scheduling. The following rules apply:

	Field Name	Source	Error	Rule Text
1		WHMMYY $date_lkp		The calendar functions as an interactive calendar for bulk migration system availability. Upon customer login: The first reservation date available is 8 business days from login. Please use date lkp for appropriate days. (NOTE: Holidays, Weekends, and Black outs) Example: If the customer logged into the system on 2/2/2004. The first available date for reservation would be on 2/12/2004. The customer can reserve dates up to 120 days out. The calendar displays the number of lines reserved for each day. • Limit of 200 lines can be reserved per state and wire center. • The dates are color coded with the following designations: o Red – not available (200 lines reserved) o Yellow – partially available o Green – available o Gray – Holiday, Non-business day, BST Blackout • The customer can view the number of lines available per day via the interactive calendar.
2	This field is a required input.
