

I would like to express my support of the Amateur Satellite Corporation petition docket number 02-54 filed by Perry Klein. The Amsat group is fostering an environment of leading-edge technology and engineering. I have personally provided some assistance to California Polytechnic State University students from San Luis Obispo on their experimental CubeSat satellite designs. I was most impressed with the degree of engineering complexity the students were developing. I think we should do everything we can to foster and promote engineering excellence in this country.

Respectfully,

Ed Larsen, KI7WB
