

I wish to express my agreement with the use of the Rainbow-1 satellite, its frequencies and its transponders, for the use of EchoStar. I am an EchoStar customer in Puerto Rico, and I if Echostar would transmit on this new satellite, folks in Puerto Rico have a better chance of getting a stronger satellite signal and better service throughout. This would help local market competition as Directv is the dominant player, and Dish ahs too weak a signal to compete.
