

I would like to continue receiving VOOM programming because of their commitment & track record of providing the most HDTV programming than any other single satellite, network or cable television provider. A new entity, VOOM HD LLC, has shown the desire to continue operating Rainbow-1 at the 61.5 frequencies, thereby maintaining a third satellite television provider rather than going back to only two providers. I would also like to remind the FCC of your past rulings that side on increased competition and consumer choices; therefore, the sale to Echostar as proposed, is clearly not in the best interest of the public.
