

I support the policy of Sorenson Media. I believe that the VRS Providers interoperability is definitely NOT the best policy, and that the speed waiver needed to be remained in place until dust settle down first. Sorenson spent millions of dollars on the development of the videophones known as VP-100 and i2eye and gave away for free to deaf people. It would be very unfair to Sorenson Media if FCC forces all of the VRS Providers to allow the interoperability. The CSD-Sprint, competitor of Sorenson, is a 6 billion dollars company that could not bother to spend millions of dollars on the research and development of the videophone for the deaf. Sorenson, a small company comparing to Sprint, developed VP-100 with its whole money, therefore, Sorenson deserves the income fully. Giving the interoperability to Sprint or HOVRS or Hamiltion is like allowing them to steal Sorenson's millions dollars in R&D. I said "No" to interoperability. I said "Yes" on speed waiver.

Thanks.
