**EXHIBIT 20.A.2****Providing a full range of communications services to enterprise customers nationwide and globally at an accelerated pace**

As Verizon explained in its Application, large enterprise customers will benefit from the creation of a strong and stable new facilities-based competitor that will be capable of providing a full range of communications services to these customers nationwide and globally. While a number of competing companies assemble and provide full-service capabilities to large enterprise customers, this transaction will add another strong full-service provider capable of delivering integrated, end-to-end services on a facilities basis nationwide, and will enhance the combined entity's ability to make available the broad range of communications services and national and global reach that large enterprise customers demand. *See* Bruno/Murphy Decl. ¶¶ 35-36; McMurtrie Decl. ¶¶ 19-20.

Further, the combined company will offer customers services provided over centrally managed networks, leading to increased transparency in network management that many customers value. *See* Bruno/Murphy Decl. ¶ 49; McMurtrie Decl. ¶ 21. Ownership of the various pieces of the network enhances a carrier's ability to achieve standardized quality of service and other management protocols across the entire network. *See* Bruno/Murphy Decl. ¶ 49. Large enterprise customers will benefit by having a single point of accountability and comprehensive management of a full suite of domestic and international services, including network CPE, local and long-distance, wireline and wireless, circuit-switched and IP. *See* Bruno/Murphy Decl. ¶¶ 35-36; McMurtrie Decl. ¶¶ 19-20.

Because of the benefits to enterprise customers as a result of this transaction, Verizon estimates that it will achieve a total of approximately **[Begin Highly Confidential]** **[End Highly Confidential]** million in revenue synergies from the combined firm's enterprise

business. This estimate represents the net present value of expected revenues, net of the costs to achieve the revenues.

Verizon's Enterprise Solutions Group ("ESG") has identified two broad categories of revenue synergies: (1) revenue synergies expected from greater retention of MCI's enterprise customers, and regaining lost customers, due to the combined firm's improved attractiveness to current and previously lost MCI customers ("Financial Stabilization" synergies); and (2) revenue synergies from growing the combined enterprise business in ways that could not be achieved by either company as quickly or as efficiently in the absence of the transaction ("Go-To-Market" synergies). The Go-To-Market synergies largely are attributable to the introduction in the marketplace of next-generation enterprise products at an earlier time than could be achieved by either Verizon or MCI without the transaction.

*Financial Stabilization Synergies.* Verizon expects the transaction to enhance MCI's ability to retain its existing enterprise customers, as well as regain lost enterprise business. Verizon believes that it is uniquely positioned to achieve these Financial Stabilization synergies, relative to other firms. Private investment groups and firms outside of the telecommunications industry with "deep pockets" may be able to provide similar financial backing as Verizon, but such investors cannot bring the needed stability, expertise, or credibility to MCI that would allow the company to retain and regain lost business. Verizon's distinctive industry experience, reputation, publicly-stated commitment to the enterprise category, and assets will inspire confidence in customers that MCI's enterprise assets will be the subject of long-term investment. MCI's core enterprise customers are large and sophisticated firms that want their suppliers not only to be financial stable, but also to have the commitment to providing superior service over

**REDACTED – FOR PUBLIC INSPECTION**

the long term. Thus, Verizon is in a better position to restore and increase confidence among MCI's customers than other potential financial backers or suitors.

**[Begin Highly Confidential]**

**REDACTED – FOR PUBLIC INSPECTION**

**REDACTED – FOR PUBLIC INSPECTION**

**[End Highly Confidential]**

*Go-To-Market Synergies.* Verizon expects that the combined firm will be able to sell a broader array of enterprise services than either firm would be able to achieve absent the transaction. The combination also will enhance and accelerate both companies' abilities to develop next-generation products to meet enterprise customers' evolving demands. Verizon's internal business plans refer to these increased capabilities as "Go To Market" synergies.

**[Begin Highly Confidential]**

**REDACTED – FOR PUBLIC INSPECTION**

**[End Highly Confidential]**

**Reinforcement of assets that play a critical role in national defense and homeland security**

As explained in greater detail in response to Specification 22, much like enterprise customers generally, national security customers will benefit from the strengthening and reinforcement of an important technology and infrastructure provider and the ability to obtain a

**REDACTED – FOR PUBLIC INSPECTION**

full array of existing and future services across the country. MCI has constructed some of the critical domestic and global networks used by national defense and security agencies for high-speed data communications. The combined entity will have the financial strength and commitment to ensure that those networks remain robust, reliable, and technologically advanced. Verizon already has committed to invest \$2 billion of capital, and a total of \$3 to \$3.5 billion including expenses, to further strengthen MCI's network and systems, and this investment will redound to the benefit of governmental customers, including those responsible for national security and homeland defense, just as it will for other enterprise customers. Moreover, the transaction will not only reinforce the existing assets used to provide service to defense and national security customers, but, as with other enterprise customers, it also will add new capabilities and expertise that the new company can bring to bear in serving government customers.

#### **New products for mass market customers**

The transaction between Verizon and MCI will benefit mass market customers in markets throughout the country by combining the companies' complementary broadband assets and expertise, which will enable the new company to deliver IP services more efficiently. Verizon has extensive wireless and local broadband network assets and is one of the leading providers of residential DSL services. Moreover, it is in the midst of making a significant investment in the deployment of fiber to customers' premises, which will enable consumers to have extraordinarily high speed and high capacity pipes directly into their homes. While MCI lacks these assets, it has a global Internet backbone and provides a broad range of IP services to its customers and has longstanding Internet expertise at every level. Combining these complementary assets will

**REDACTED – FOR PUBLIC INSPECTION**

create a seamless, end-to-end IP network on a nationwide basis and permit the efficient interconnection of customers and content and service providers. That platform will support a broad array of multimedia communications services and applications for all customers and bring an array of benefits. This integration will be particularly important in the mass market as Verizon rolls out video, VoIP, and other services that require high bandwidth.

The combination of the companies' capabilities also will accelerate the pace of innovation and enable the companies to deliver products and services more efficiently to the mass market. While Verizon is currently investing heavily to roll out an advanced network, including fiber to the premises, to succeed it obviously needs to develop new capabilities and deliver products and services efficiently to mass market customers. MCI has deep experience and expertise in the areas of IP networks and products, and that expertise will enable the combined company to deliver products and services more efficiently to mass market customers. For example, a combined firm would have every reason to bring to the mass market innovative services and features that were initially developed for enterprise customers, an incentive MCI would lack as a standalone company as its mass market business declined. For example, security services would be one area of expected new product development for mass market customers. Although new developments in the area of security may initially be provided primarily to enterprise customers, these developments likely also would be useful to small businesses, as well as residential customers, particularly in the context of home offices. Thus, the potential consumer benefits from innovation would increase.

**REDACTED – FOR PUBLIC INSPECTION**

### **Wholesale services**

Many of the same considerations that will produce benefits to enterprise and government customers apply equally in the wholesale segment. Simply put, wholesale customers will benefit from the creation of a nationwide provider with a broader facilities-based reach because it will give them another strong supplier from which to choose. Further, the combined company will have strong economic incentives to develop and provide competitive and attractive wholesale offerings. In an industry as competitive and dynamic as communications, companies with large fixed infrastructure investments need viable wholesale businesses in order to fill their networks, help recover the costs of, and earn returns on, those past investments, and contribute to the financial justification of new investments. While a carrier would generally prefer to have the end user as its customer and collect the resulting retail revenues, a carrier inevitably is going to lose customers to retail competitors, and it would rather collect revenue generated by having some of the wholesale traffic on its network than forfeit this revenue entirely because that traffic ended up on alternative facilities. That is why long distance companies have long had wholesale businesses: when the long distance business was opened for competition, AT&T developed a wholesale offering for other long distance providers in order to keep as much long distance traffic as possible on its network rather than having traffic migrate to competing facilities. The combined Verizon-MCI likewise will continue to have similar incentives.

### **Cost reductions and synergies**

Verizon expects that the cost saving synergies will be generated in four principal areas: information technology, network, international operations, and headcount reductions. Each category of efficiencies is described further below.

**REDACTED – FOR PUBLIC INSPECTION**

*Information Technology.* **[Begin Highly Confidential]**

**REDACTED – FOR PUBLIC INSPECTION**

**REDACTED – FOR PUBLIC INSPECTION**

**REDACTED – FOR PUBLIC INSPECTION**

**REDACTED – FOR PUBLIC INSPECTION**

**REDACTED – FOR PUBLIC INSPECTION**

**[End Highly Confidential]**

Capital Savings and Expenditures. Verizon has committed to invest \$2 billion of capital, and a total of \$3 to \$3.5 billion including expenses, to further strengthen MCI's network and systems. However, the combined company also will be able to achieve capital savings by avoiding certain capital expenditures that would be necessary but for this acquisition and reducing procurement costs. Under its Enterprise Advance plan, Verizon planned to expand its network outside its franchise area to reach large businesses, introduce new services with greater bandwidth, and increase the flexibility for voice and data management on a single network. The integration of Verizon's and MCI's networks will make much of this planned build-out unnecessary and give Verizon greater network reach more quickly and at lower cost than it otherwise could. **[Begin Highly Confidential]**

**REDACTED – FOR PUBLIC INSPECTION**

**[End**

**Highly Confidential]**

The combined company will reduce procurement costs by obtaining the benefit of greater economies of scale and discounts in purchasing network equipment. In past transactions, such as GTE/Bell Atlantic and Bell Atlantic/NYNEX, Verizon was able to achieve procurement cost savings in the range of **[Begin Highly Confidential]** **[End Highly Confidential]** by migrating one of the party's purchases to the more favorable procurement contracts of the other party, and taking advantage of further economies of scale through the standardization of equipment purchases. Verizon's capital purchases are significantly greater than MCI's purchases. Verizon has an annual capital program totaling in excess of **[Begin Highly Confidential]** **[End Highly Confidential]** In contrast, MCI's annual capital program totals less than \$1 billion. Verizon has conservatively estimated that this transaction will enable the combined company to attain total procurement cost synergies equal to **[Begin Highly Confidential]** **[End Highly Confidential]**

**[End Highly**

**Confidential]**

These capital savings will be offset by the need for additional capital spending in the network area. **[Begin Highly Confidential]**

**REDACTED – FOR PUBLIC INSPECTION**

**[End Highly Confidential]**

These expenditures, coupled with additional systems-related investment, will result in a total of \$2 billion in capital investment. Verizon believes that these additional capital expenditures will be necessary to insure that MCI over the longer term can adequately support the needs of large enterprise customers.

Verizon also expects to incur capital costs to migrate Verizon private line traffic, currently carried via third party carriers, to the MCI network following the acquisition. Currently, Verizon purchases private line access from Qwest, AT&T, and Sprint. **[Begin Highly Confidential]**

**[End Highly Confidential]**

*International Operations Savings.* Verizon believes that the acquisition of MCI will enable it to achieve cost savings in international operations through the streamlining of support functions and the selective disposition of certain operations. These operational improvements

**REDACTED – FOR PUBLIC INSPECTION**

are expected to result in cost savings of **[Begin Highly Confidential]**

**[End Highly Confidential]**

*Headcount Reductions.* Verizon estimates a combined headcount reduction of 7,000 persons, resulting in a net present value of **[Begin Highly Confidential]**

**[End Highly Confidential]**

**Enhanced investment and innovation**

Verizon has long been committed to bringing increased investment to critical network infrastructure and accelerate the delivery of innovations to all consumers. For example, it has invested in a national wireless network and associated assets such as spectrum and, more recently, has been developing 3G wireless services such as EV-DO. On the wireline side, Verizon has deployed DSL across its footprint and is now investing billions to deploy fiber-to-

**REDACTED – FOR PUBLIC INSPECTION**

the-premises, which will enable Verizon to provide an integrated offering that includes voice, data, and video.

Verizon will bring that same commitment to investment and innovation to the combined company. In fact, the combined company will have an even greater incentive to innovate and invest because it will be able to roll out new services, innovations, and technologies to a larger customer base and over a broader geographic reach than either company would alone. The combined customer base and broader geographic reach will enable the firm to justify some investments that presently can not be justified by either company standing alone. Verizon has already stated that it will invest \$2 billion in capital to enhance MCI's network and information technology platforms, and a total of \$3 to \$3.5 billion including integration expenses (much of this spending is detailed above). In particular, Verizon will bring the financial resources needed to maintain and improve MCI's key domestic and global communications infrastructure used to provide IP-based services to large enterprise customers and to the federal government. *See* Bruno/Murphy Decl. ¶¶ 31, 50-52; McMurtrie Decl. ¶¶ 18, 32.

The transaction also will accelerate innovation. Although predictions about innovation are necessarily tentative, the companies see opportunities for marrying Verizon's wireless and local broadband capabilities with MCI's IP-backbone and emerging services capabilities. *See id.* ¶¶ 38-42; McMurtrie Decl. ¶¶ 15-18. The combination of product offerings will provide a stronger, and geographically broader, facilities-based solution for large enterprises. *See* Bruno/Murphy Decl. ¶ 39; McMurtrie Decl. ¶¶ 19-20. Verizon currently has some IP-based offerings, but has limited reach within its geographic footprint, and Verizon is not a major provider of IP-based services. *See* Bruno/Murphy Decl. ¶ 40. MCI's core strength is its global Internet backbone, which provides global IP connectivity today, and will be able to provide next-

**REDACTED – FOR PUBLIC INSPECTION**

generation VoIP and other IP-based services worldwide tomorrow. *See id.*; McMurtrie Decl.

¶¶ 12, 15-18. The combined company will thus be able to offer converged IP-based solutions to large enterprise customers with nationwide and global needs on a facilities basis. *See* Bruno/Murphy Decl. ¶¶ 40, 43-47; McMurtrie Decl. ¶¶ 19-20.

These service innovations will benefit all customers. Services that are first delivered to commercial and institutional customers as customized offerings can be standardized and efficiently offered to consumers at all levels. *See* Hassett et al. Decl. ¶¶ 20, 23, 27-28. The combined companies' integrated IP network and expertise will not only enable the combined company to provide services more efficiently, but also to add new features and functions more quickly, and ultimately to deliver them faster and more efficiently to mass-market and larger business customers alike. *See id.*

#### **“Seamless mobility” services**

“Seamless mobility” services are just one example of the type of innovative service this transaction will enable the combined company to develop and rollout on an accelerated basis. Commercial and institutional customers want their employees to have access to communications capabilities anywhere, at any time, with the ability to take advantage of the highest available bandwidth – whether that bandwidth is WiFi or WiMax, cellular, or landline. *See* Bruno/Murphy Decl. ¶ 42. Verizon has taken the first steps towards realizing this vision by introducing “iobi®,” which delivers unified communications and specialized features nationwide. *See* Hassett et al. Decl. ¶ 27. The combined entity will be able to extend that innovation and make it available to large enterprise customers much more quickly and broadly than either Verizon or MCI could achieve on its own. *See id.* ¶¶ 27-28; Bruno/Murphy Decl. ¶ 42.

**REDACTED – FOR PUBLIC INSPECTION**

**Benefits to small and medium business customers**

Because of the benefits to small and medium business customers (“SMB”) from this transaction, Verizon expects that the transaction will result in additional revenue synergies from the combined firm’s provision of service to those customers. As discussed in more detail below, Verizon estimates that the undiscounted value of those revenue synergies will be between **[Begin Highly Confidential]** **[End Highly Confidential]** annually between 2006 and 2014, with related annual costs to achieve those synergies at **[Begin Highly Confidential]** **[End Highly Confidential]** over that same time period.

*Estimated Revenue Synergies.* Verizon’s estimates of synergies from the provision of service to SMB customers is based on the assumption that the combined company will be able to enhance its product offerings to these customers, resulting in revenue growth opportunities, in five key areas: (1) hosted IP, including trunk and line side; (2) hosting and security; (3) IP-VPN; (4) churn reduction; and (5) new customer growth. Each of these categories is discussed below:

Hosted IP – Trunk and Line Side: MCI has a comprehensive IP offering with nationwide coverage. SMB customers are expected to benefit from the extensive geographic coverage, enhanced features, and speed of the hosted IP system. As a result, Verizon estimates it will achieve a **[Begin Highly Confidential]**

**REDACTED – FOR PUBLIC INSPECTION**

**[End Highly Confidential]**

**Provision of Wireless Services to MCI's Enterprise Customers**

Verizon estimates that it will achieve a net present value of **[Begin Highly Confidential]**
