

Further consolidation of the Cable Industry should not be allowed. There is far too much control of what information people are allowed to receive and at what cost. Cable rate increases have far exceeded the cost of inflation, and exceeded the rate increases of other commodities. We need more, not fewer choices. I was VERY DISAPPOINTED when it was ruled that cable companies did not have to open their cables to other internet service providers. Monopoly control of services is not competition. Please take actions that prevent further consolidation of the cable industry, and actions to diversify access to the information cable lines are capable of transmitting.
