

I am a volunteer WPVM -LP, Asheville. I have a passion for music, and I love being able to share music with others. Thanks to the existence of Community Radio, and WPVM, I am able to share music with more than just my friends by having my own radio show. I just wish more people were able to listen. I want to listen. I live two blocks from WPVM's studio, and I can't pick it up at my house. All I can pick up is a commercial classic rock station out of Knoxville.

From what I understand, the problem is caused from our mountainous terrain. One of the ways the problem could be resolved is if WPVM could own translators. In my opinion, if the FCC is going to allow WPVM to have a license, then the FCC should allow us fix our signal problem so that we can be heard.

A move to a different frequency would at least help us escape the Knoxville station's interference. To make this move easier, I support the FCC's position to open up the FM spectrum by getting rid of the obsolete "third adjacent channel" spacing rules.

Whatever it takes; I just hope that WPVM can get our signal problem fixed, and that our efforts might make it easier for the next LPFM station that comes along and has similar problems. I really appreciate the fact the FCC supports the LPFM movement. It seems FCC must be getting the message that the public wants to have access to the public's airwaves. Thank you very much for accepting public comments on this subject.
