

I own and operate a small WISP in Natrona County, Wyoming. We currently operate in the unlicensed 2.4 and 5.8 frequencies to deliver broadband Internet to our business and residential customers. We have plenty of company in the 2.4ghz here and could utilize any frequency made available. Please do not squeeze us out of any additional frequency. I am against licensing any or all of the 3650 band and against dropping the contention based mechanism.
