

Thank you for opening up the 3650-3700MHz band. I use local area wireless for my local networking needs. The wireless is much cheaper than other options. I plan to use the 3650-3700MHz band as soon as such devices are available to compliment my existing wireless networks to supply public Internet access to a mesh of connected access points. Please leave the 3650-3700MHz band open for such use. Thank you, Steve Herber.
