Dear Ms. Marilyn Bray

I feel that the technology at crossroads helps me achieve my goals by allowing me the skills to increase my reading and math comprehension and another way technology benefits me by giving me the skills I need to go on in life. If technology was not available some of the things I know now I will not know and we will not have the remedial reading and math. If I had some more ideas I will tell you more but that's all I have thank you.

Sincerely  
Derrick Harris

Dear Marilyn Bray

Since I have been at CWI technology has helped me improve in a lot of things such as reading, Math, and now I am taking High School Online. So I have done a lot of things on the computers besides remedial I do reports, research, and Microsoft powerpoint presentations. I have also achieved my Job goals from using Choices on the computer. If the computers wasnt a part of the program I would probably have gone crazy because I enjoy using them. The computers I enjoy reading on them because for some reason I cant concentrate reading in a book.  
Thank you for reading my letter.

Sincerely

Rollin W. Follete

FCC - MAILROOM

Dear Marilyn Boy,

Technology has helped me out a great deal at this program. If it were not for computers, I would not be able to be enrolled in college. Virtually all of the stuff I do for college I need the internet or at least a computer for. I am very thankful for the internet but sometimes I have to research for days even weeks just to get all of the information I need for my assignment. It is too late for me as it looks like I am leaving soon but for future college students it would be nice if the programs could have high-speed internet or at least a few select computers for staff, college students & high school students to take on-line courses to better their education for the future. After all, knowledge is the key to success & the whole goal for students, at least this student is to be successful when we leave the program & how you practice is how you play therefore what you do in the program is what you'll do when you get out if you stay -cused.

Thank you

Clinton Stacy

June 6<sup>th</sup>, 2005

Dear Marilyn Bray,

During my 17 years of living, technology such as computers has been a positive influence in the development of my goals. It has helped me in getting me going, making me with my knowledge, and also helping me to help others with my friends and others around me. It has made up a big part in current events and my knowledge.

In my short time in being a part of Crossroads, I have been able to keep my mind fresh and prepare me for college because I just graduated by allowing me to study on the computer and use various programs such as Orchard, Choices and Microsoft Word.

If technology wasn't available my learning process would be a lot more difficult because I wouldn't have easy availability to learn and study at my own leisure.

may concern,

While at Crossroads Computers helped me on my goals because I could choose jobs. Then I went to something I wasn't supposed to so I got kicked off. I've been off for 5 months and am responsible now to understand my mistake and hope I could get back on soon. I would not take advantage of the privilege again. I also do star testing it also helps me bring my grades up

I Thank you Rogers Underwood

Dear ERate

My name is Shane and here are a few reasons why I think we should get a faster internet. Well one reason why we should really get this is for our education. I knew that for me we do alot of work on the computer, and it is very annoying when you have to wait five times longer than you should be get to where you want to go. Also, and it is did not have a great education when we came here because we were skipped school or even bened off. And for me this is a big reason to fund around and work up to get an education. So for me I would appreciate it very much if you would consider this. So thank you for taking your time to read this.

Sincerely  
Shane

FCC-MAILROOM

DEAR Marilyn Bray

To Marilyn Bray technology has been a positive attribute in my development for computers. I achieve my goals like tutor goals and I also go on Choices to look up a realstate agent so I can have a little bussines. The technology is My other goal like being a Graphic designer to make video games and make my own game system like bill gates with XBOX. The tutor system helps me to reading and math comprehension Orchard helps to. Another way it benefits me is When I go on the internet to research people from History. It also has a dicitonary and a thesaurus in the internet. If technology was'nt available in my life and development would be affected an so many ways like if I was an a college chorse I would'nt be able to go online I would have to go far away like to New York city or something. If the internet was'nt in my life I would'nt be able to do history or english essays. Inconclucion it benefits my peers and me and I think we should get DSL because it is faster.

Thankyou for your time

Marcus's note

To whom it may concern is that  
computer technology could help us in various  
ways. I say various because computer could help  
us on many projects that we could do in our  
middle school to high school time. The Internet  
helps us look up people that had existed many  
years ago that we haven't heard anything  
about or events that occurred. I think that  
the computer has many things we could learn  
from and use in our lives. It could help  
us to update our reading or writing skills. It could  
help us improve so we could be better people.

To whom this may concern why I  
have been here technology has helped me by  
I can go on the computer and get information  
that I need for research and if I need  
to look up someone I can just go on the  
computer and look them up. Also now  
technology benefit me time at this program  
is that why we are sitting in class  
we can just go on the computer and  
we can go on orkaid and learn math,  
reading and other skills that we need  
in life. Also it benefited my time by  
giving me something to do when I am  
here. Then I would I be affected if  
I didn't have technology. Because I  
would not be able to look my research  
that I need and I wouldn't be  
able to go on and do tutors to help  
me get better in education.

FCC-MAIL ROOM

Hi! My name is Robert Wolff from Port Charlotte FL, I entered the program on January 4, of 2005. I came in here already having half a credit in Business System class at my old school Port Charlotte high with a few of the kids that I use to do bad things with, so I didn't really learn much because I was never here to learn. But now in here I have the chance to get caught back up, but the internet here is really slow and it freezes if a lot of people are using which is not good for kids that really need it. One of my goals here is to pass the class so when I graduate I can look at a future in computer building for people of schools and stuff.

The computer's have really helped me so far I just wish it was a little faster or better technology so I could get a lot more things done. Mr Malloy is the head guy of our Education and he said we maybe could get DSL or a modem that works just as fast so when people get online it will be easier for us to load and download things that we need. It benefits the kids here because if we didn't have computers here for us to look up information that we need for school or projects for school.

Also the internet is a big part of learning here because it opens up new ideas and topics for us students to find out about. Since back using the computer I have got a lot of information that will help me find out about things we need to get a look into the future for kids our age.

I really am writing this letter to ask if you can put the E-rate money to good use and help us get the right cable we need so everyone can be on line at the same time instead of just one person allowed on. We really how you will consider our reasons for the money that we need and help us afford a little bit.

Thank YOU for listening to my reasons.

Sincerely

Robert Wolff

TO Marilyn Bray:

The Technology has been a fun way to LEARN. THE education has been a different way to Show and find RESEARCH. Using <sup>my</sup> technology help me with my math, by tutor me step by step. I have increased my math comprehension. I now understand math enough to get my G.E.D. I'm now out remedial class but I still use the technology to study and improve in the area.

I benefit from this along with my PEERS. Because if we didn't have it how would we get the RESEARCH we need. We can use books but the book limited to information. The computer can find many ways to get RESEARCH. Plus being that the work today is built off of computers and technology, it benefits me and my peers by preparing us for the world. Giving us the tools to succeed.

FROM,  
Sharon Woodard

Dear Ms. Marilyn Gray,

Hi, my name is Javier Johnson, and I'm writing you to let you know how Computer Technology been a positive attribute in my development lifestyle and how it help me achieve my goal. The Computer has really helped me a lot when I needed help on my research papers I needed to complete. I would also say that the computers at Crossroads really helped me a lot with my reading and with my attending Remedial classes in the afternoon. I really learned a lot from the computers and I just want to say how the computer would affect me if I didn't use it. Well if I didn't spend time working on the computer's doing my research, I wouldn't know much as I know now. I would be lost all because I thought I knew a lot. So I would like to thank the Associated Marine Institute program for providing the Internet usage at Crossroads.

Sincerely,  
Javier Johnson

Dear Marilyn Bray:

I love using Technology to learn  
Because of using, the computer is easier  
to use than learning it by rote  
and kind, and sometimes it just  
in a book kind of stinks because  
we rather look on a computer  
and the internet for a dictionary, thesaurus  
plus to help us read we use  
Tutor, orchard, and even the  
World Wide Reference Place where  
you can get a dictionary and look  
up words.

Thank you  
for your time

Sincerely,

Jimmy Wagon

Dear Ami

I want to tell you how I feel about our technology here at Ami programs. Well I think it is good because working on computers can help you on goals that you need to know to earn credits and pass to the next grade level. That's how I think Ami programs are helpful towards my education.

Here at Crossroads Wilderness Institute we use the Reading Tutor to help us to reading. I have found this tutor program take very beneficial to my education.

We also have a math program called Orchard which has helped me tremendously to improve my math skills.

If this technology was not available it would be very difficult for me to better myself in reading and math because I need to work very hard in these subject areas. By using the computers, I can work independently to improve in these subjects. I can get more work done and not have to be helped by staff all the time but can work more independently.

I am thankful that we have technology at this program and hope that in the future have even better opportunities than we have even had.

Thank you for letting me express how I feel about this subject.

*Stacy*

A RKA

Dear, A.M.

1. Technology has helped me out tremendously. I mean there has been many important things that you made, and instead of ~~carrying~~ <sup>carrying</sup> things around with you, ~~see~~ they can get stolen/lost you will have it down-loaded on a Compact Disc, or stored inside a computer. Movies also portray technology important in always, but another way its import here is for education ~~purposes~~. I've gained so much knowledge by using the online STAR testing Center, and in order for me to achieve my goals.

2. Technology benefits my time in this program because instead of using a workbook and taking longer to complete something like that I can cover a semester of any class that I'm taking online in about 6-9 weeks.

3. If technology wasn't available in this program I would be so far behind in school. It would affect me by pushing me back in school.

Eduardo Gonzalez

Dear AMI

Technology has been a positive attribute in my development and my ability to achieve my goals. Because it's help me out on my education, the computers give you good programs to work on my goals. And it's also going to help me out in the long run. These are some of the ways technology benefits my life at this program. It's helpful because the programs on the computer here are just like the ones at school. And the programs on the computer could help you get as many credits as you may need to pass to the next grade. Also if technology was not available, my life and development would be affected. In these ways I would not have a good education I would be stuck like off the side of the road but thanks to the technology that we use these days at AMI programs it would make me successful in life.

DEAR E-RATE,

I think we should have high speed internet because are internet process slow. When we are doing research it take like 10 minutes to load up the program. When we are on internet near it effect others programs. It can be hard for two people to get on the internet at the same time, because it's so slow. So if we had high-speed internet it would be better because more students will be able to go on it and more research will get done. It will not effect the other programs.

THANK YOU

Johnny Davis

JUN - 9 2005

FCC - MAILROOM

Dear E-rate,

I think we should have high-speed internet on our computers because our computer services is slow. It take like 15 minutes after you have typed the web site in to load. Because of it's so slow only one person can likely be on the internet at a time. The internet effect other programs such as tutor, when you're on tutor then when someone gets on the internet it make tutor slow. So if we had high-speed internet more students can get on the internet at one time. And you will not be waiting 15 minutes for a website to come up. And it will not effect other programs. Those are the reasons why I think we should have a high-speed internet services.

Thank You,

Charles J. Wilson

FCC - MAILROOM

Dear E-rate

June 3, 05

To show this may concern I feel that all us a student body and staff. We'd appreciate a more upgraded internet the reason I say that is because it takes more than enough time for one student to go to a program then when we try to go on the internet it takes an outrageous time. Also I feel it would be much less expensive for staff. The reason I say that is because each staff has to wait and give one another a turn just as they can get a turn to look up a web site. With out it takes five minutes at a time. Next I feel it will do lot of good for me because looking up a web site or a program. With a wider upgrade would be a life saver for me. Because the phone I have right now everything runs on a time schedule around here. And me getting quick information on a website could do some good for the whole student body. So E-rate could you please grant Crossroads Wilderness Institute a more upgraded internet system. Because it will help students in the present and the future.

Thank you

Brandon Faust

Technology has helped me achieve my goals in many ways like facts on how to need and live of a certain amount of money, computer courses and facts on our country and the past. It benefits my time at this program by teaching me the morals and necessities of life. If Technology wasn't available there is a lot of factual things I wouldn't know. Also the way the country is on the ways of life would be uncivilized.

To whom it may concern:

I am writing this letter address the issues of how technology has helped me to achieve my goals, how technology benefits my time at this program, and how I would be affected if technology was not available to me.

The use of technology has helped me to start and complete writing assignments. It has also helped me by providing me with online classes like Algebra II, which I need to graduate high school. These are the ways technology has helped me to achieve my goals.

Technology has benefited me by providing me with the tools to further my education, and knowledge. For instance when I am finished with my class work, I usually get on the Orchard program and work on my reading and critical think because those are my weak points in my education. These are the ways that technology has benefited my time at this program.

If technology was not available to me it would not be possible for me to obtain all my high school credits and earn my high school diploma. The unavailability of technology would also put a pause on my education and possibly cause me to lose some of my knowledge due to me not being able

to exercise my mind. These are the way that the unavailability of technology would affect me.

In conclusion these are the way on how technology has helped me achieve my goals, how technology has benefited my time at this program, and how the unavailability of technology would affect me.

Sincerely,

C. Gil
