

My name is Paul Murdock, and I am a WISP (Wireless Internet Service Provider) operating near Salt Lake City, Utah. I am grateful to the FCC for enabling the opportunity for myself and many others to utilize the unlicensed spectrum currently found at 5.8GHz, 2.4GHz, and 900MHz.

The current proposal to partition additional unlicensed spectrum in the 700MHz band would enable wireless providers to reach a greater customer base and reach customers that perhaps were not previously attainable due to the physical properties of the lower frequency band. The adoption of additional unlicensed spectrum would enable many new businesses to grow and enable broadband to reach more individuals.

Regards,
