

Our Company is a small wireless ISP that employs 5 people. We have been in the ISP business serving SE Wisconsin for 10 years. We currently have 95 customers using our wireless service after 2 years of operation. We have 6 tower sites over 150 feet in height. We have performed over 500 site inspections and with current technology and regulations have only been able to connect to 95 sites primarily because of tree obstruction. Cable and DSL does not reach our customer locations and FCC limitations on power and spectrum has had a negative impact on our ability to provide service in our markets. Please make this frequency available to local WISP's so that we are better able to serve our communities and retain local jobs and investments.
