

To whom it may concern,

Auctioning off the TV channels is not acceptable to us. We need those TV channels offered up under the FCC 04-186 NPRM. Rural people who cannot get signal because of the unacceptable number of towers it takes to cover a few blocks in a heavily treed area using higher frequencies. We could maintain higher density modulation schemes without fallback if the signal to noise ratios were more stable as we will have with TV channels. Spectrum is getting tight because of the massive growth of wireless broadband in my markets and unlicensed use of unused television channels will help this. We will prove that Grandma will never lose her TV signal with our systems regardless of the NAB "Sky is falling" mentality.

Thank you for your time,
Levi Patrick II
