

"A Majority without Knowledge of a Voice."

I can not understand the supposed democracy we live in and a Club repeater advocate in a statement recorded played saying "Learn The Morse Code." That is inappropriate on a issue not endorsed by all the Club members.

By majority the Amateur Radio Operators already Morse Code credited, there is only one way they are going to vote. They had to pass it, so no one else should be excluded from passing the Morse Code to gain HF privileges. Besides, it keeps down the number of amateur operators and keeps bands quiet. Clubs pander exclusive to this idea of fairness. They are fortified and will not give way. It is a condescending irony.

The majority of the populous concerning a vote on removing the Morse Code requirement have no idea the issue is being put to vote and no one to rally them. So the comments and answers to removing Morse Code if by majority of this forums opinion can't but help go one way.

Two faced.. One organization said a representative of amateur operators, have turned coat and now working with the most dominate manufacture of government communication systems, public business and citizens products to help them institute BPL. Creating a noise level of multiple harmonics reaching into every radio resonate frequency and directly into their home. BPL, may be in a disaster, other wise it is a disaster in it's self. BPL, signals sent over unshielded power lines creating a signal level of 9 on every receiver is no advancement in technology but a back step in civilization. They are against removing the Morse code requirement to HF privileges.

There are two major Government's retaining so far the Morse Code. All others no longer require it as a mandatory requirement to secure HF communications.

I depend, survive and live in the truth and I can not see justice and democracy by opinion on this forum if yes and no is determined by such travesty. It looks like another carrot just out of reach of a tired horse, forced to carry the inhabitants of it's carriage, injustice.
