

I am a deaf citizen writing to request that you support stricter captioning regulations for closed caption TV. With more than 30 million Americans being deaf or hard of hearing, there is a tremendous need for accurate captioning. This doesn't even take into consideration those who know English as a second language and use captions to further their English comprehension. I find it frustrating to have to play "Wheel of Fortune" and guess what the words are on TV when I'm watching a program and the captions are garbled. As a tax paying American, I believe I have the right to accurate information as much as any other person without a hearing loss.

Please support Docket 05-231 and require more accurate captioning.  
Thank you!
