Re: *Ex Parte* Presentation; ET Docket No. 05-247

Dear Ms. Dortch:

This letter and the attachment are filed for inclusion in the record in the above-referenced docket. The attachment is a letter dated February 28, 2006, from the Advanced Wireless Group, LLC (“AWG”), the operator of the central Wi-Fi antenna system at Logan International Airport to Mr. John Stelly of Continental Airlines. In this attached letter, AWG offers service terms to Continental for meeting its Wi-Fi internet access requirements at the Continental Presidents Club at Logan.

Massport believes that this service offer reasonably meets all of Continental’s requirements for Wi-Fi access at its Presidents Club and is consistent with the central antenna exception under the OTARD rule. In particular, the central Wi-Fi antenna system would broadcast Continental’s own SSID code, which will give the club members the same Wi-Fi settings as all other Continental club lounges. The price for this service is also less than the amount Continental indicated it is paying for its current Wi-Fi internet access in its pleadings in this proceeding. As discussed in Massport’s pleadings, the central Wi-Fi antenna system offers superior signal quality throughout Logan and could be made available to Continental without any delay. Massport believes, therefore, that this offer satisfies the requirements of the central antenna exception and constitutes a very reasonable accommodation of Continental’s needs.

We believe that this offer is important to the possible resolution of this dispute before the FCC.

Very truly yours,

Christine M. Gill

RE: Wireless Internet (Wi-Fi) access proposal for the Continental President's Club lounge at Boston Logan International Airport.

Dear Mr. Stelly,

On behalf of Advanced Wireless Group, LLC (AWG), the operator of the wireless data (Wi-Fi) network at Boston Logan International Airport, I am writing to formally communicate our offer to Continental Airlines regarding the provisioning of Wi-Fi access in the President's Club lounge at Logan Airport. This offer is predicated on the fact that Wi-Fi is provided as a complimentary service to your club room members. Previous AWG attempts to contact Continental to discuss the specific parameters of this proposal and its inherent advantages have gone unanswered. We urge you to seriously consider this proposal in an effort to amicably resolve this matter.

With technology allowing AWG to offer limited SSID broadcasting alternatives on the antenna, AWG is offering the following to Continental specifically for provisioning of complimentary Wi-Fi Internet access to club members within the President's Club lounge:

1. Access through the existing 802.11g based AWG wireless infrastructure with redundant wireless Access Points providing better coverage with at least 5 access points servicing the club room.
2. Availability of a broadcast SSID of "co\_presidents\_club." This means that Continental club members will use the same Wi-Fi settings as all of the other Continental clubs.
3. Data traffic routed via the AWG redundant, enterprise class Gigabyte Ethernet network offering superior reliability to the existing single point connection.
4. Internet Access provided via our primary DS3 and redundant T1 WAN circuits. These WAN circuits will provide a faster connection than the service as currently measured. With the advent of higher bandwidth applications, Continental club members will also be able to watch streaming video and download content and files faster than the current system.
5. 24/7/365 service and support with optional full CRM call center. With local AWG technical staff, any service issues are resolved quickly and Continental's customers can optionally have access to the AWG call center for any configuration questions.
6. Quality of Service equal to or greater than the existing President's Club Wi-Fi service due to the redundancy of access points, higher speed WAN connection, and enterprise class systems and on-site support.
