

I am very concerned with the implementaion of "Switched Video" and the fact that it will not work properly with Cable Card devices. Many cable companies are planning on implementing switched video even though Cable Card devices will NOT be able to tune in the channels that are broadcast using switched video. Even more disconcerting is that cable companies are considering broadcasting local high definition using switched video. If this happensm I will not be able to tune in my local high definition channles on my Cable Card device. I respectfully ask that switched video be thouroughly reviewed and tested, before the cable companies are allowed to break the functionality of Cable Card, and possibly other, third party devices. Thank you for your consideration in this important matter.
