

I oppose the proposed Comcast/Time Warner/Adelphia merger, MB Docket No. 05-192, because it will adversely affect competition, consumers and workers. In the event that the FCC ignores the wishes of consumers like me and decides to allow the merger to go through, it should at least impose conditions that create real choices for video programming by giving competitors access to regional sports programming and other competitive programming or services.

The FCC should consider the interests of millions of Americans like me who pay the bills and rely on cable television for programming and news. We need cable companies to air programming that serves local communities and competition that gives us lower prices and more choices. Many of us already have enough trouble trying to afford cable TV and are not happy with the programming selections. Please don't make it easier for Comcast and Time Warner to block free speech, raise prices, and keep out competitors!!
