

Please increase competition by removing outdated laws and reducing FCC interventions. Do not increase FCC meddling in the free market.

The internet is expanding rapidly and with the next version will be 10X faster than the present with much more availability. This will make faster than real-time and video downloading possible as well as real-time HDTV downloading possible.

Video and audio (I bite my tongue not to say radio and television) on demand are the future. Today's podcasting is just the beginning. FCC, get out of the way and let her roll.
