

It doesn't make sense to require morse code testing for voice communication. What does morse code mode have to do with voice mode? Don't need morse code testing for voice communication on VHF, why do we need it for communicating voice on HF? What is the difference between HF and VHF that you would need to take a code test for voice on HF? Doesn't make sense to me. Plus, most amateur radio operators have commented on how simple, easy, dummed down the 5 WPM test is any way. If it is that simple, then just do away with. Again, it doesn't make sense to have the code required for operating voice on HF. Require the test for those who want to do morse code on any band. Thank you.
