**Re: WT Docket No. 01-309
HAC Digital Wireless Telephones**

Sixth Semi-Annual Report

Dear Ms. Dortch:

The Filer, CC Communications, is the licensee of Cellular Radiotelephone Service Station KNKN223. This report is submitted pursuant to the requirements of Paragraph Nos. 89 – 91 of the Commission's Report and Order (WT Docket No. 01-309), FCC 03-168, released August 14, 2003 ("R&O").

By way of background information, the Filer is a small, Tier III Commercial Mobile Radio Service licensee, as defined in the Commission's E-911 Order to Stay, FCC 02-210, released July 26, 2002. The Filer provides Frequency Block B cellular service to the Nevada 1 – Humboldt RSA. The digital portion of the Filer's wireless system employs the Code Division Multiple Access ("CDMA") air interface.

The Filer currently markets eighteen (18) models of CDMA digital wireless telephones. Of these, a total of eight (8), the Motorola Models V710 and RazrV3c, LG Models 3300, 4270, LG9800 and LG Migo, and Kyocera Models SOHO KX1 and KX5, meet a U3 (or M3) rating under ANSI Standard C63.19. None of the units marketed by the Filer meets a U3T (or M3T) rating under ANSI Standard C63.19. However, three (3) models (the Motorola KRAZR and RAZRV3m and the Nokia Model 5256) meet an M4/T4 rating, which exceeds the Commission's U3T (or M3T) Hearing Aid Compatibility requirements.

To achieve compliance with the Hearing Aid Compatibility ("HAC") requirements of the R&O, the Filer is literally at the mercy of the handset manufacturers to develop and market HAC-compliant digital wireless handsets. As a small, Tier III wireless carrier, the Filer has no influence over the product development and distribution decisions of wireless handset manufacturers; and, accordingly, must rely on the manufacturers to develop HAC-compliant digital wireless handsets for use on the Filer's system.

Given the foregoing, the information requested by the Commission is identified as follows:

Item 1 -- Digital Wireless Phones Tested: The Filer has not tested any digital wireless telephones for HAC compliance. All testing will be done by the handset manufacturers.

Item 2 -- Laboratory Used: None. See Response to Item 1.

Item 3 -- Test Results For Each Phone Tested: Not applicable. See Response to Item 1.

Item 4 -- Identification Of Compliant Phone Models and Ratings According To ANSI C63.19: Eight (8) of the digital wireless handset models marketed by the Filer, the Motorola Models V710 and RazrV3c, LG Models 3300, 4270, LG9800 and LG Migo, and Kyocera Models SOHO KX1 and KX5, meet a U3 (or M3) rating under ANSI Standard C63.19. None of the units marketed by the Filer meets a U3T (or M3T) rating under ANSI Standard C63.19. However, three (3) models (the Motorola KRAZR and RAZRV3m and the Nokia Model 5256) meet an M4/T4 rating, which exceeds the Commission's U3T (or M3T) Hearing Aid Compatibility requirements.

Item 5 -- Report On The Status Of Product Labeling: None. It is anticipated that product labeling will be handled by the handset manufacturers. To date, the manufacturer-supplied packaging for all of the compliant digital wireless handset models marketed by the Filer indicates that the units are hearing aid compatible.

Item 6 -- Report On Outreach Efforts: In the past six months, the Filer has had four (4) customer inquiries regarding the availability of HAC-compliant digital wireless phones. The Filer's Customer Service personnel are aware of the HAC-compliant digital wireless handset issue and have been trained to respond to customer inquiries regarding HAC-compliant phones. In addition, the Filer has a policy which allows customers (hearing impaired or otherwise) to test handsets and service without commitment for up to two weeks. If the customer is not satisfied, the customer may return the handset free of charge (assuming that it has not been damaged) at the end of the two-week trial period.

Item 7 -- Information Related To Retail Availability of Compliant Phones: See Response to Item 4.

Item 8 -- Information Related To Incorporating Hearing Aid Compatibility Features Into Newer Models Of Digital Wireless Phones: The incorporation of HAC features into newer models of digital wireless telephones will be accomplished by the handset manufacturers.

Item 9 -- Any Activities Related To ANSI C63.19 Or Other Standards Work Intended To Promote Compliance With The Requirements Of The Commission's Report and Order: None.

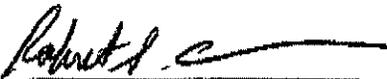

Item 10 – Total Numbers Of Compliant And Non-Compliant Phone Models Offered As Of The Date Of This Report: See page 1 of this report. The Filer currently markets a total of eighteen (18) digital wireless handset models, of which eight (8) meet a U3 (or M3) rating under ANSI Standard C63.19. In addition, three (3) models meet an M4/T4 rating.

Item 11 -- Any Ongoing Efforts For Interoperability Testing With Hearing Aid Devices: Interoperability testing will be performed by the handset manufacturers.

Very truly yours,

CC Communications
