

We are for some reason a household that has been forced to have teleconferencing for years, and evidentially also Arpanet giving away our address...we have been refused the right to do anything about this to stop this, and along with our teleconferencing "associates" dissatisfaction with having to view our household all of the time they have a fear of being caught doing so- so they are constantly battling with themselves over their own actions. We are living in our home, and we are bystanders to the main activity...recently wired broadband electrical (listed as a lightning bolt -DEGRADE" on the FCC Legend) radiology and electrical signals have been being forced into our house, and physical injuries have been created in us, and in our pets. This appears to be what you are encouraging - degrading people with damage by electrical assault. Lightning bolts. This has been a terrible outrage, and I have written to many people about it. Bruises and damages show up EACH DAY. Documented physical changes in every living creature; humans, cats, birds- in the house are factual and can be proven as a primary evidence-"out of the air damage". Not only is it terrorist attack, it appears to be anonymous. I can find devices for harm of this same type shown on Stargate Cinema under Butt kicker equipment, and Clark equipment. I see our neighbor, Schubal Bowman, has big electric batteries on his porch, and hits out of the air come from his direction. I see Broadband show up on our computer, yet we have only a modem, and I see a CEO from Adesso software listed in hidden files in our computer-Adesso can bring broadband and medical radiology access into any computer, and TV files into our computer. Time-Warner and GE have Radiology networks, and also have a big complaint with the invasion of privacy that we have been "given". But I do not have the identifying factor of who is harming us, because the FCC is not insisting upon anyone having to be identified. We, and however many other consumers, are held hostage to things that you are doing without giving us identification of any telemedical person ever accessing anywhere- ALL signals should be able to be identified by company, and by the person and time. All damage done should have a specific identifier that can be read by anyone they would harm. Devices that read the forms; oscilloscopes for personal use and safety, that read in Electrical/RF/Microwave, Battery if possible- need to be able to be purchased by average people. Such devices cost hundreds and thousands of dollars! The Federal Communications Safety measures that I need to have in place are instead something that people are patronizing-This is a complaint. We are in danger and you are not even making it clear that we need to be able to identify any telemedical person, and other persons using any and all forms of FCC communications. Some of the most hostile persons are workers with the IEEE and Military- some of those workers are insultingly hostile to any safety discussions at all, as if they take pride in doing harm, and they will sneer at anything else, and they take pride in stalking the public, and ridiculing the public being safe at all. Thank you for your time and any attention to these issues.
