Seamlessly link your facilities with a secure Metropolitan Area Network (MAN). Exchange data between remote sites at speeds up to gigabits per second and command your traffic while Comcast Commercial Services manages the connectivity.

Support your varying application needs with real-time traffic prioritization. Deploy performance sensitive, mission critical applications with confidence. Get true any-to-any connectivity and integrate new sites without reconfiguration or additional capital.

Enterprise NETWORK Service creates a reliable meshed network while offering multiple classes of service for varying applications. Choose **Basic Bandwidth** for email and file sharing, **Priority Bandwidth** for critical enterprise applications like CRM and ERP and **Premium Bandwidth** for real time applications like VoIP and video streaming. Comcast can help you determine the exact mix of bandwidth classes and capacity based on your current and future requirements.

Service Features

- Any-to-Any Connectivity – Send traffic to any site within your network through a single Ethernet interface.
- Secure – Reliable data segregation provided by masking your traffic with a unique customer ID on the Comcast network.
- Class of Service Aware – Dynamic traffic delivery with up to three different performance levels.
- VLAN Transparency – Change your VLAN configurations without coordinating with Comcast.
- Web-based Reporting – Monitor connectivity and performance through our secure web portal.

Business Benefits

- Enhanced User Experience – Improve response times of bandwidth-intensive applications and enable new applications like ERP or VoIP.
 - Ease of Use – Connect your Local Area Networks (LAN) without any wide area network (WAN) equipment to purchase.
 - High Availability – Minimize interruptions and keep your business running smoothly. We monitor and support your network 24x7 and have over 99.97% network availability.
 - Optimized ROI – Reduce operating and maintenance costs with less equipment to support.
 - Minimized Risk – Deliver networking capabilities to your internal customers on-time and on-budget.
-

The benefits of a fully meshed regional architecture are simple to calculate and with Comcast Commercial Services it's cost-efficient and easy to integrate and manage complex network architectures.

Comcast Enterprise Network Service is a Cisco Powered Network service. Comcast Enterprise Network Service achieved this designation by maintaining high levels of network quality and by basing our service end-to-end on Cisco equipment—the same equipment that virtually all Internet traffic travels on today.

Telecommunications

Increasing Margins with Lower Transport Costs

Carriers are expanding their networks to complete coverage, increase QoS and grow market share. As a result they face rapidly increasing transport costs. Whether it is local loop charges or backhaul transport, carriers need to quickly address operational expenses to drive fiscal performance.

Carrier face other issues, like having limited configuration options and spotty coverage in residential and rural areas. While most networking companies can deliver in certain areas, very few have a wide footprint. Those that do have broader coverage, usually have rigid pricing structures and inflexible service configurations. Worst of all, you are often buying from a competitor or their parent company

Comcast's services can be deployed quickly and efficiently with minimal wait and bureaucracy than you are typically confronted with when purchasing services from traditional telephone carriers. Comcast We offers carriers a range of services that can support your voice and data transport needs with much lower costs. From traditional TDM, ATM and SONET, to Ethernet and managed wavelength configurations, Comcast has a solution to meet virtually any requirement.

Our pricing structures aren't impacted by LATA boundaries or local loop charges allowing us to offer more flexible terms. We can provision a tailored network that can rapidly scale so you don't need to over-engineer for future demand.

Comcast Commercial Services leverages the massive network of our

parent company. This allows you to have managed access on a carrier class transport network designed for broadband applications. Our reach is broad and deep, with capacity in dense urban, sprawling suburban and even many rural areas others can't reach. More importantly, Comcast's Network is not part of the traditional telecommunications infrastructure, allowing Comcast to offer a physically diverse routing.

Comcast Advantage

Lower-cost data and voice transport on a single company's fiber network with broad reach and technical and economic flexibility.

Carrier Benefit

Cost-effective transport that can reach into new markets and scale at a moments notice. A stable and reliable service from a trusted network provider.

Contact us today to find out how your transport needs and our capabilities can be meshed for the technical and financial benefit of your organization.
