

Our Company supports a unlicensed channel plan for the tv whitespaces. We are a Wireless ISP providing service to all of Puerto Rico, which due to the nature of terrain and tropical climate, there are lots of difficulties using equipment in the bands above 2 GHZ. The 900 Mhz space is also too occupied by other applications. TV white spaces would be a great asset to provide services in the most needed areas like rural which are underserved right now by traditional broadband providers like Cable and DSL.

Thanks for your attention on this matter

Gino Villarini
