RE: Free Wireless Broadband for America

Chairman and Commissioners:

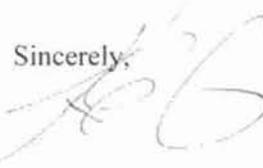

I am a broadband enthusiast. Virtually every important aspect of my life is made easier or more efficient thanks to broadband access to the Internet. I shop, communicate, attend classes, get directions, entertain myself and even obtain spiritual guidance online. Right now my regular dictionary is covered with dust because I have multiple online resources available to me at the touch of a button. When I need health information, stock quotes, downloads of my favorite songs, or I want to send a letter to you, the Internet is a great resource. Unfortunately, my broadband connection is both expensive and immobile.

That is why I am so excited about the M2Z proposal to establish a nationwide wireless and portable broadband network for free. It doesn't get any better than that. Like many Americans, I have dumped my desktop and now have a laptop. While the freedom is great, searching incessantly for an Internet connection is not. Worse yet, I already am paying too much for my connection at home and this is only exacerbated by the fact that I usually have to pay *again* whenever I'm out of the house. I long for the day when I can travel and not have to pay the equivalent of 20% of my monthly home broadband budget for the privilege of what ends up being mere minutes of usage.

I must admit, however, that I was surprised to learn that it took the FCC nine months before it decided to seek input from the public on M2Z's proposal. Why? As I understand it, the FCC has never come up with a plan for using the spectrum but now M2Z has come up with a compelling one – and basically only incumbents oppose it. Wouldn't it be in everyone's interest, except those that want us to keep paying out of the nose for broadband, to move quickly on M2Z's proposal? If spectrum is owned by the public, isn't it time a wireless company stop charging us admission to go on our own property?

The public needs M2Z's service. Broadband should not be for just for the well off. I encourage you to make competitive and affordable broadband a reality soon. Please grant the M2Z application.

Sincerely,

Ricardo Colon
