

I am not sure if my comments went through before, i never rcvd a confirmation number.

I just wanted to voice my opposition to RM-11306 and the ARRL's attempt to push this through without consulting the membership first (i am a member...but will now let it lapse), now i understand that ARRL matters of membership are of no concern to you, but i am a low power CW operator, the Winlink system is coming under fire from a great number of us, and there are a lot of us, many of which are very vocal. please reconsider this proposals potential damage, there are many other modes that can do what WL2K can do, and besides, unidentified interference on frequency, a lack of checking the frequency first to see if it is clear, interfering with existing communications, willful or not....all violations of rules that you, the Commission itself, have made regarding the listed violation, to name a few.

Please do the right thing and listen to us on this, we are very in tune with what happens on the amateur frequencies. please hear us. If you need to contact me, please do at n7ya@rock.com...Thank you.
