

1. Allowing encryption on the ham bands will make it impossible for you to monitor communications for illegal uses or inappropriate language.
2. The Email robots would be able to disguise the content of email so that commercial email traffic could be passed on the ham bands without detection.
3. Terrorist groups would be able to use amateur radio frequencies and amateur transceivers with pirated calls without detection. Unlike cell phones, there is no record anywhere of communications on the ham bands so such activity could be traced.
