MIDWESTERNERS CUT THE CORD: HOUSEHOLDS IN DETROIT AND MINNEAPOLIS-ST. PAUL HAVE THE HIGHEST RATE OF WIRELESS SUBSTITUTION AMONG 20 LARGEST U.S. CITIES, ACCORDING TO TELEPHIA

Sun Francisco Has the Lowest Substitution Rate

SAN FRANCISCO—October 18, 2006—More and more U.S. households are dropping their landlines and opting to go completely wireless. According to Telephia, the largest provider of consumer research to the communications and new media markets, households in Detroit and Minneapolis-St. Paul have the highest rate of wireless substitution among the 20 largest cities in the country. Detroit and Minneapolis-St. Paul posted household wireless substitution rates of 19 and 15.2 percent, respectively (see Table 1). The Tampa metropolitan area secured a 15.1 percent rate, representing nearly 177,000 households. Nearly 219,000 (14.3%) households in Atlanta and 220,000 (13.6%) households in Washington D.C. cut the cord. Rounding out the top 10 were Phoenix, Seattle, Denver, Boston and Los Angeles.

“Several factors influence the rate of wireless substitution across different metropolitan markets including income levels, ethnic mix, and average age,” said Kanishka Agarwal, Telephia’s VP of New Products. “Telephia provides wired and wireless service providers with the research they need to understand and track this important change in consumer behavior at the market level.”

San Francisco: Tech Capital Holding onto Landline

San Francisco, which generally leads the nation in the adoption of many new technology products, landed at the bottom of the list. According to Telephia, the San Francisco metropolitan area posted just a 5.5 percent wireless substitution rate, which works out to be a little over 105,000 households.

“San Franciscans have traditionally been early adopters of advanced technologies. It is a bit of a surprise to see this metro much lower on the list, but this could be driven by the area’s high income level or its relatively low level of mobile network quality,” added Agarwal. “For topology and zoning reasons, mobile networks in San Francisco are not as reliable as compared to other top cities and it’s a less attractive substitute.”

Table 1: Wireless Substitution Rates for Largest U.S. Metropolitan Areas

Metropolitan Area	Total Households	Wireless Substitution Rate	Wireless Only Households
New York	6,988,000	6.5%	453,254
Los Angeles	5,374,491	9.8%	527,497
Chicago	2,751,090	8.3%	228,748

Philadelphia	2,309,987	7.4%	171,102
Boston	1,950,139	10.0%	194,962
San Francisco	1,903,708	5.5%	105,127
Dallas	1,694,764	8.0%	135,219
Washington, D.C.	1,613,508	13.6%	220,145
Houston	1,613,508	8.7%	140,821
Phoenix	1,543,860	13.5%	207,714
Atlanta, GA	1,532,252	14.3%	218,393
Detroit	1,474,213	19.0%	280,612
Seattle	1,288,485	13.2%	169,938
Tampa	1,172,405	15.1%	176,877
San Diego	1,102,757	9.6%	105,983
Cleveland	1,079,541	7.3%	78,287
Denver	1,056,326	11.3%	119,460
St. Louis	1,056,326	7.2%	76,090
Minneapolis	975,070	15.2%	148,254
Baltimore	858,990	5.8%	49,981

Source: Observed data from the Telephia Total Communications Survey (Q2 2006)

Note: Wireless substitution rates were determined through an online survey of 700+ households for each metropolitan area. National Health Interview Survey (NHIS) data was used to adjust for off-line households. Differences in wireless penetration rates between cities may not be statistically significant.

About Telephia

Telephia is the largest provider of syndicated consumer research to the communications and new media markets. Telephia is your connection to the digital consumer.

Since 1998, executives at service providers, device manufacturers, content providers, and retailers have relied on Telephia data to make confident competitive strategy, marketing and resource allocation decisions. Telephia uses its unique measurement tools and large-scale consumer panels to completely understand the digital consumer's behavior, attitudes and experience.

To learn how Telephia data can help you understand the digital consumer and track your competitive performance, please contact us at (415) 395-0500 or sales@telephia.com .

U.S. Colorado

Broadband internet access, often shortened to wireless internet "broadband Internet" or just "broadband" is a high data-transmission rate internet connection. DSL and cable modem, both popular consumer broadband technologies, are typically capable of transmitting 256 kilobits per second or more, approximately nine times the speed of a modem using a standard digital telephone line.

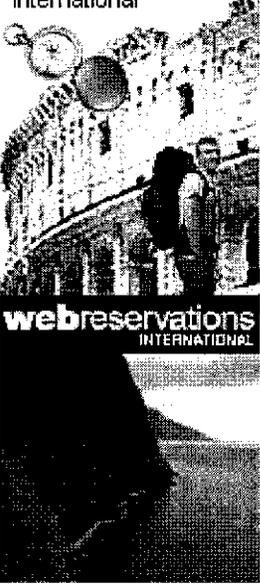

Broadband Internet access became a rapidly developing market in many areas in the early 2000s. Modern consumer broadband implementations, up to 54 MBit/s, are several hundred times faster than those available at the time of the popularization of the Internet (such as ISDN and 56 kbit/s) while costing less than ISDN and sometimes no more than 56 kbit/s; though performance and costs vary widely between countries.

Wireless websurfing at the breakfast table, e-mail on the sofa, send a fax from the veranda? Cast off the cables for real Internet, ADSL and ISDN fun. WLAN lets you put full ADSL speed in cable-free PC, while you connect your computers in a high-speed network.

16th St. Mall now one big hot spot - for free Wi-Fi

The new wireless Web service runs the length of the mall. It helps put Denver "on the cutting edge," a downtown booster says.

By Kimberly S. Johnson and Julie Dunn
Denver Post Staff Writers
Denver Post

Article Last Updated:04/18/2006 04:42:01 AM MDT

Forget about paying for wireless Internet access at places such as Starbucks and FedEx Kinko's. On Monday, the Downtown Denver Partnership began offering the service for free along the 16th Street Mall.

From Civic Center Station to Union Station, individuals sitting outside can browse the Internet using a Wi-Fi, or wireless fidelity, connection. The service is intended for use outdoors, but it can be picked up from inside some buildings and parked cars. It's also available in Skyline Park along Arapahoe Street.

Marvin Carter, a senior marketing consultant who lives in Denver part time, wasn't aware of the new service, but once he logged on, he was impressed.

"Wow, this is pretty neat," said Carter, who was using his laptop on the patio at the Paramount Cafe on Monday afternoon. "I do a lot of work out and about downtown, and I always have to go to a Starbucks to get online.

"To have it free in an area like this is definitely a plus."

Offering public Internet access in a popular area of the city helps put Denver "on the cutting edge" of offering a service that residents and tourists want, said Tami Door, the partnership's president and chief executive.

"As we look at creating gathering places and having people use the downtown pedestrian environment, this is one way to encourage that," she said. "It's a really nice amenity."

James Bradley, an analyst with downtown's RedPeak Properties, was able to log on to the server while sitting inside the Starbucks at 16th Street and Court Place.

"I wasn't sure if it would work in here, but I have a really strong signal," he said. "I think it's an absolutely wonderful service. I bring my laptop just about everywhere. More and more work is being done out of the office."

Broomfield-based Kiva Networks has a contract with the partnership to install and maintain the free service. Access is unlimited this week but will later be restricted to two hours per 24-hour period.

Door said the group is not paying Kiva Networks for the service. Last year, the partnership spent \$1,000 on a Wi-Fi feasibility study.

Kiva officials said they would fund the operation and maintenance of the network through advertising on the Web page seen when users first log on.

The mall network, called the Downtown Wi-Fi Zone, is distributed using a central server and antenna on top of the partnership's headquarters at 16th Street and Glenarm Place.

Another location, which runs strictly on solar power, is set up at the Denver Pavilions, said Jeff Grant, principal engineer for Kiva.

Small antennas affixed to 16 light poles along the mall allow users to access the signal.

The network took about three weeks to design and build, said Grant.

Both FedEx Kinko's and Starbucks offer wireless Internet for a fee through T-Mobile. A full day of access costs \$9.95.

Despite experiences such as Bradley's, in which he was able to get the partnership's free service from inside a Starbucks, the coffee shop isn't worried about losing business.

"People come here for the experience of Starbucks," said Michelle Grove, one of the managers for the Starbucks at 16th and Blake streets. "It's about being able to have the tools they need (Internet access) in that meeting place."

But Suresh Pabba, a marketing executive who works downtown, said he would definitely forgo spending up to \$24 a month for wireless service at Starbucks and FedEx Kinko's and try the partnership's service.

"Yes, I would try (the free service) and stop going to FedEx," he said

Kiva, which also installed the free Wi-Fi system available in Cherry Creek North, said its technology will automatically boot users off the network if they abuse the two-hour limit.

The process of bringing Wi-Fi to the 16th Street Mall was smooth compared with other cities, such as San Francisco and Philadelphia, where efforts to make Wi-Fi available to the entire city have been met with opposition from telecommunications and cable companies eager to sell their broadband services packaged with phone and cable TV offerings.

Free Wi-Fi access is also available along the Pearl Street Mall in Boulder. Glenwood Springs and Frisco offer city-funded Wi-Fi service.

Staff writer Julie Dunn can be reached at 303-820-1592 or jdunn@denverpost.com.

FAQ

What you should know about the Wi-Fi service on 16th Street Mall provided by the Downtown Denver Partnership:

Q: What is Wi-Fi?

A: Wireless fidelity, a technology that enables Internet use from a computer without a physical, wired connection to the Internet.

Q: How do I get it?

A: Your computer must be equipped with a wireless card or adapter. Some laptops have this function built in; others require a separate piece of hardware that can be inserted into the back or side of the computer.

Q: Is there a cost for using the new service downtown?

A: Basic service - two hours during a 24-hour period - is free. Kiva Networks, the Broomfield company maintaining the network, said it will charge a fee for unlimited services and more secure services.

Q: Do I have to be outside to use it? Will it work inside buildings or in places with fee-based Wi-Fi service such as Starbucks or Kinko's?

A: The service primarily is for use outside along the mall. Depending on the structure and location of the building, you may be able to get the partnership's free service inside.

Q: Is it high-speed?

A: Kiva Networks said download speeds are at 1 megabit per second, which is faster than dial-up but a bit slower than DSL and cable.

WiFi: Coming to a city near you?

The high-speed Internet connection would be available to city agencies and residents for a fee, with a discounted rate for the low-income.

By Andy Vuong
Denver Post Staff Writer
Denver Post

Article Last Updated: 09/27/2006 11:04:38 AM MDT

Ten west-metro communities stretching from Lakewood to Boulder are working together to create one of the largest regional Wi-Fi networks in the country.

The so-called Colorado Wireless Communities network **would** be privately funded and operated and would blanket each of the 10 cities, an area that **covers** about 220 square miles and more than 600,000 people.

The group will issue a request for proposals by Nov. 1, said Christopher Puccio, director of information technology for Boulder

The goal is to have a private vendor start building the network by the third quarter of 2007, with the process taking 12 to 18 months, Puccio said.

The network would be open to city agencies and residents for a fee, expected to range from \$20 to \$30 a month. A discounted rate would be given to low-income residents. The group is aiming to get upload and download speeds of 1 to 2 megabits per second, Puccio said. Qwest's basic high-speed service is 1.5 mbps, and Comcast's basic service is 6 mbps.

Municipal Wi-Fi, as such networks are called, has caught on in dozens of cities across the country, including Philadelphia, San Francisco and New Orleans.

In many cases, companies including EarthLink and MobilePro finance, build and operate the networks. EarthLink is expected to spend \$15 million to \$18 million to build a network in Philadelphia that covers 135 square miles.

In exchange, the cities give the companies access to infrastructure and other assistance. The companies get the monthly user fees from customers.

The companies get "one-stop shopping for rights-of-way agreements (and) leasing arrangements," said Clark Johnson, assistant to the city manager for Arvada. "One thing that communities have are a lot of assets out on the streets that others can use to place antennas, etc."

The cities get lower-cost and more widely accessible high-speed Internet service for government agencies and residents.

"The fact that they're asking for competitive bids probably means that the residents of this 10-city area will get a good price," said Ron Binz, chairman of Colorado Common Cause, a public-interest group. "More importantly, it's going to happen."

Today, 135 cities are in the process of deploying a regional Wi-Fi network, according to Muniwireless.com, a portal for news and information about such projects. In July 2005, the number was 34.

More cities are moving toward Wi-Fi to "save money on operations and become more efficient," said Esme Vos, founder of Muniwireless.com.

"For example, if you have citywide Wi-Fi, and the cops can roam around and use the network and download information from state and local databases while on the road, it saves them time," Vos said.

Locally, Vail and Longmont have plans for citywide Wi-Fi networks.

The Downtown Denver Partnership launched a network along the 16th Street Mall this year that is free for the first two hours.

The city of Denver is reviewing proposals for a network, but only for government use.

WavMax™ Broadband is a subsidiary of Hometown Access Communications founded in 2000. Today the WavMax is one of the largest Wireless Broadband Service Providers (WBSP) in the USA and is the first to substantially cover a top-25 US city. WavMax's network footprint delivers commercial-quality wireless broadband access to the internet via secure radio frequency (RF) transmission. With over 60 cell sites, the WavMax reaches a large and growing number of business customers in the Western region. WavMax offers an array of low cost carrier-quality IP services including data, voice, video, HotZon and worldwide internet roaming to the wholesale and business markets.

Recent FCC regulatory and Supreme Court decisions limiting CLEC access to major-carrier phone and data lines strongly support "last mile" alternatives to the broadband access "duopoly" of cable companies and RBOCs. These rulings have aided, amongst other factors in creating a favorable business climate for WavMax. In the five years since the company's Creation, WavMax has successfully executed its strategy to deploy a widespread, carrier class, affordable wireless broadband network to effectively address the wholesale market and offers a "last mile" Solution to commercial customers to gain access to the Western region

WavMax has proven its ability to effectively plan and efficiently execute its commercial-grade solution for deployment of widespread, low-cost wireless broadband services. WavMax is poised to become the largest wireless broadband provider in the western United States and will continue to be the leader in the wireless broadband industry by offering new technology and delivering services that are reasonably priced, fast and reliable.

* WavMax will not accept or pay any invoice not previously authorized and documented by an official WavMax Purchase Order *

Compare		Marketplace Results Showing - How The Search Results Work			

Filter Results - This tool allows users to filter through hundreds of different plans and compare

- 1) Sorting by plan type, country, area code and city will let you know which providers are
- 2) Sort by actual providers and look at all the plans available for that individual provider
- 3) Sort by popular features and look at plans that only have the features you want.
- 4) Use the advanced search tool to sort by minimum and maximum price or select from a list to help select the best voip provider.

Page Results - Sort through the results by average monthly costs, long distance rates, and user

- 1) Average monthly cost includes the equipment, setup fee, activation fee and monthly bill divided that by 12 to give you the average.
- 2) Long distance rates include the amount of free long distance minutes the plan offers a minute after the free minutes are gone.
- 3) Click on the user ratings to see how users rated each provider for sound quality, reliability, features, price and overall rating. You can also add your own voip review.

Goal - Our goal is to provide our users with the most relevant information available so that they can make a decision. If you have any comments or suggestions to improve our product, please share those on our feedback page.

*911 over a VoIP service may not function in certain circumstances such as in the event of a loss of power, connection, or if you provide incorrect address information. For more information, please review our page on your VoIP provider and visit nena.org

**E911 over a VoIP service is different from traditional 911 service in important ways. Click Here

We do not have any information about availability for services marked with "*"
